0 RESUMEN TFG. BUQUE DE SUMINISTRO A PLATAFORMAS

RESUMEN

En este trabajo se va a desarrollar el proyecto de un buque de suministro a plataformas petrolíferas.

Las características más importantes que va a poseer este buque han sido las siguientes:

- Necesidad de una amplia cubierta, que se utilizará como plataforma de carga.
- Tanques para carga líquida y seca, entre las cuáles se encuentran los lodos y los cementos usados en los trabajos de explotación.
- Doble casco, ya que al transportar productos contaminantes es necesario que se garantice la flotabilidad.

También cuenta con sistemas de posicionamiento dinámico, en este caso el del nivel máximo actual, ya que es necesario que el buque se mantenga en una posición concreta, incluso en condiciones adversas, mientras se realiza la operación de carga y descarga.

El buque proyecto también contará con la capacidad de dar apoyo en caso de incendio, por ello se le dota de equipos de lucha contra incendios.

Se ha considerado importante que el buque también pueda luchar contra la contaminación del mar, pudiendo cercar y recoger residuos de hidrocarburos del medio marino.

RESUMO

Neste traballo vaise desenvolver o proxecto dun buque de subministración a plataformas petrolíferas.

As características máis importantes que vai posuír o buque foron as seguintes:

- Necesidade dunha cuberta ampla, que se utilizará como plataforma de carga.
- Tanques para carga líquida e seca, entre os que se encontran lodos e cementos usados nos traballos de explotación.
- Dobre casco, xa que como se van transportar produtos contaminantes é necesario garantir a flotabilidade.

Tamén cona con sistemas de posicionamento dinámico, neste caso conta co do nivel máximo actual, xa que é necesario que o buque se manteña nunha posición concreta, incluso en condicións adversas, mentres realiza as operacións de carga e descarga-

O buque proxecto tamén contará coa capacidade de dar apoio en caso de incendio, por isto dotáselle con equipos de loita contra incendios.

Considérase importante que o buque poida loitar contra a contaminación no mar, poidendo cercar e recoller hidrocarburos do medio mariño.

SUMMARY

In this work is going to develop the project of a platform supply vessel.

The most important characteristics that this vessel will have are the following:

- The need for a wide deck, which will be used as a loading platform.
- Tanks for liquid and dry cargo, among which are the mud and the cement used in the exploitation works.
- Double hull, it is going to transport polluting products and it is necessary to guarantee buoyancy.

It also has dynamic positioning systems, in this case the current maximum level, it is necessary that the ship remains in a specific position, even in adverse conditions, while the loading and unloading operation is carried out.

The project ship will also have the capacity to provide support in case of fire, for this reason it is equipped with firefighting equipment.

It has been considered important that the ship can also fight against marine pollution, being able to enclose and recover oil residues from the marine environment.

PROYECTO 18-02

GRADO EN INGENIERÍA NAVAL Y OCEÁNICA
TRABAJO DE FIN DE GRADO

CURSO 2.017-2018

PROYECTO NÚMERO 18-02

TIPO DE BUQUE: Buque PSV (Platform Vessel Supply). Buque de suministro a plataformas.

CLASIFICACIÓN, COTA Y REGLAMENTOS DE APLICACIÓN: DNV GL, SOLAS, MARPOL.

CARACTERÍSTICAS DE LA CARGA: Carga líquida y seca a granel para suministro a plataformas, 5000 TPM.

VELOCIDAD Y AUTONOMÍA: 13 nudos en condiciones de servicio al 85% de MCR y 15% de margen de mar. 6000 millas a la velocidad de servicio

SISTEMAS Y EQUIPOS DE CARGA / DESCARGA: Bombas para la carga y descarga de la carga líquida. Dos grúas.

PROPULSIÓN: Propulsión diésel-eléctrica. LNG para estancias en puerto

TRIPULACIÓN Y PASAJE: 35 personas.

OTROS EQUIPOS E INSTALACIONES: Sistema de posicionamiento dinámico con redundancia DP 3. FIFI

Ferrol, 2 Noviembre 2017

ALUMNO/A: D^a Sandra Allegue García

ANEXO 1: Fichas de los buques de referencia

ANEXO 2: Informes de NavCad

1 INTRODUCCIÓN

En este Cuaderno se van a calcular las dimensiones principales del buque proyecto y los coeficientes del buque necesarios para los Cuadernos posteriores.

Se hará una primera aproximación del coste de construcción del buque, también el estudio un primer estudio de la potencia y la comprobación del francobordo para garantizar su cumplimiento en este momento.

Se estudiará el peso muerto del buque, en este caso viene dado por RPA's, l desplazamiento y el peso en rosca.

Todo lo referente a este Cuaderno es un primer estudio del buque pero va a servir de sustento para el resto del proyecto.

1.1 NOTA DE CLASE

Las notas de clase son símbolos con los cuáles se caracteriza el buque, esto sirve para determinar la normativa aplicable al buque y para definir al buque. Hay algunas opcionales y otras obligatorias según el tipo de buque y las operaciones que va a realizar.

A continuación, se encuentra una tabla en la cual se elige la mejor nota de clase para el buque proyecto y con una breve explicación de cada símbolo:

	Símbolo/Notación	Significado
Costruction symbol	✠	Construido mediante la supervisión de la Sociedad
Main Class Notation	1A	Diseñado y construido conforme a los requerimientos de las Sociedades de Clasificación
Ship type notations	Offshore service vessel (Supply)	Buque de suministro a plataformas

Aditonal Class Notations		
Structural strength and integrity	DK	Cubierta principal reforzada para carga pesada
Propulsion, power generation and auxiliary systems	E0	Cámara de máquinas desatendida
	Gas ready AEI	Los motores auxiliares pueden operar con LNG
Navigation and manoeuvring	DPS 3	Sistema de posicionamiento dinámico con redundancia según la guía de la IMO
	NAUT (OSV)	Requerimientos para los barcos de operaciones offshore
Cargo operations	-	-

SANDRA ALLEGUE GARCÍA
CUADERNO 1

Equipment and design features	F(CM)	Protección antiincendios adicional en espacio de carga y maquinaria
	SF	Requerimientos para estabilidad en averías
	OILREC	Recepción y transporte de aceite usado
	CHEM	Transporte de químicos tóxicos de plataformas petrolíferas y similares
Cold climate	Ice A	Para buques que naveguen en aguas infestadas de hielo y con grosor de 1m
	Winterized Basic	Operación en climas fríos ocasionalmente y por cortos periodos
Environmental protection and pollution control	Clean Tier III	Cumplimiento con los índices de NOx de acuerdo con MARPOL
Survey arrangements	-	-

2 BASE DE DATOS

Para la base de datos se han escogido buques con un peso muerto que oscila entre las 4000 t y las 6000 t, habiendo una variación máxima de 1000 t con respecto al buque proyecto.

DWT: toneladas de peso muerto.

L.o.a.: eslora total, en metros.

Lpp: eslora entre perpendiculares, en metros.

B: manga, en metros.

D: puntal, en metros.

T: calado, en metros.

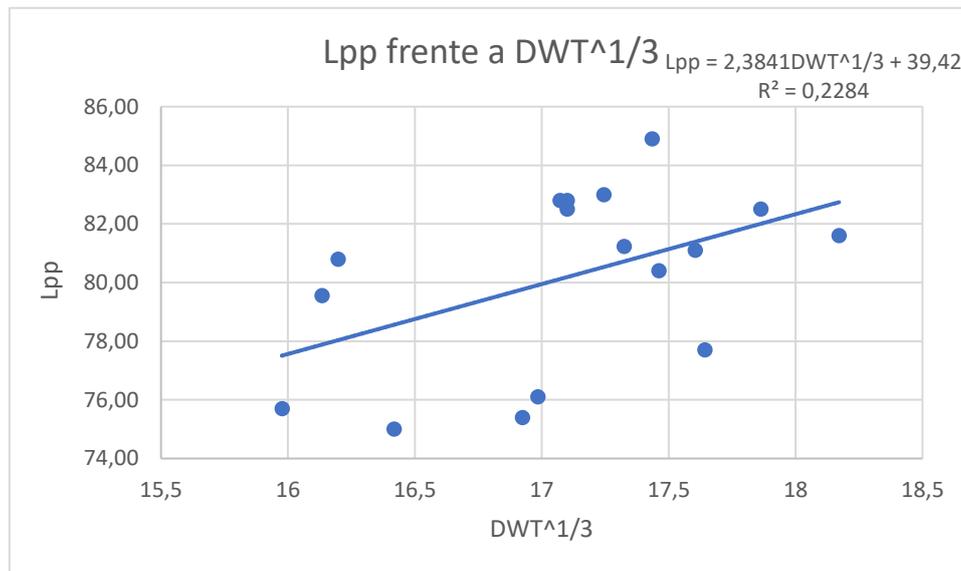

3 DIMENSIONAMIENTO BÁSICO

Mediante la base de datos seleccionada se realizará un dimensionamiento en el cual se partirá de una dimensión principal que, en este caso, será el peso muerto. Por lo tanto, el punto de partida será el peso muerto indicado en las RPA, 5000 t.

Con la base de datos se obtienen una serie de relaciones las cuales servirán para determinar las dimensiones del buque elegido mediante una serie de regresiones lineales.

3.1 CÁLCULO DE LA ESLORA ENTRE PERPENDICULARES

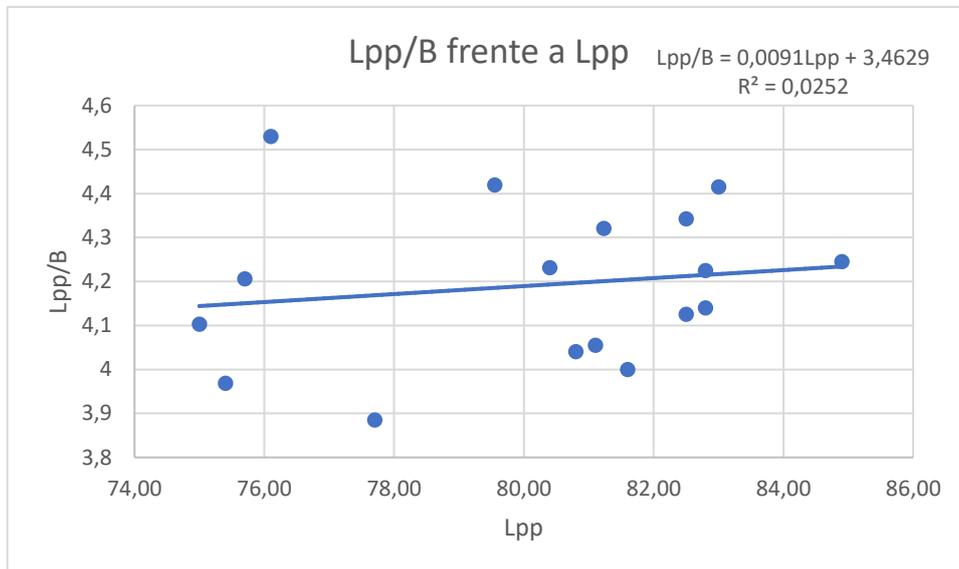

De la regresión L_{pp} frente a $DWT^{1/3}$ se obtiene el valor de L_{pp} :

$$L_{pp} = 2,3841 \cdot DWT^{1/3} + 39,42 = 2,3841 \cdot 5000^{1/3} + 39,42 \rightarrow L_{pp} = 80,19 \text{ m}$$

3.2 CÁLCULO DE LA MANGA

Del valor obtenido de la eslora entre perpendiculares y de la regresión L_{pp}/B frente a L_{pp} se obtiene el valor de la manga:

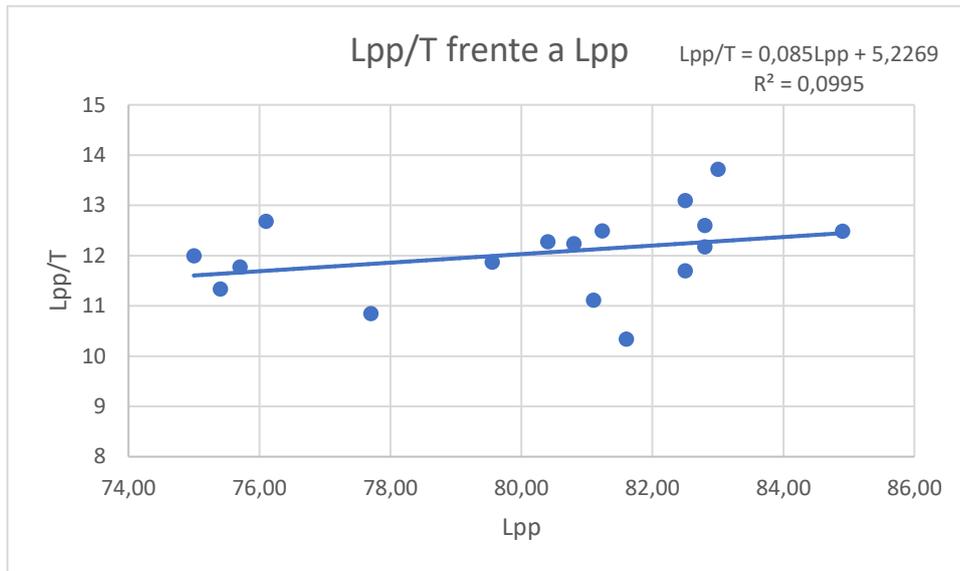

$$L_{pp}/B = 0,0091 \cdot L_{pp} + 3,4629$$

$$B = \frac{80,19}{0,091 \cdot 80,19 + 3,4629} \rightarrow B = 19,13 \text{ m}$$

3.3 CÁLCULO DEL CALADO

A partir de los valores anteriores se hallarán dos valores del calado mediante dos regresiones.

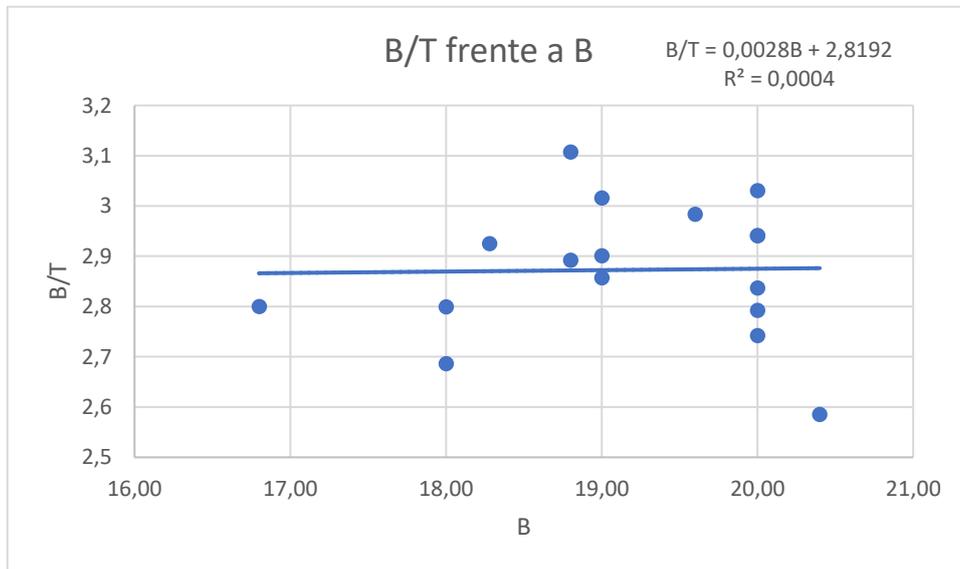

En la primera se representa L_{pp}/T frente a L_{pp} :

$$Lpp/T = 0,085 \cdot Lpp + 5,2269$$

$$T = \frac{80,19}{0,085 \cdot 80,19 + 5,2269} \rightarrow T = 6,658 \text{ m}$$

En la segunda se representa BB/T frente a B:

$$B/T = 0,0028 \cdot B + 2,8192$$

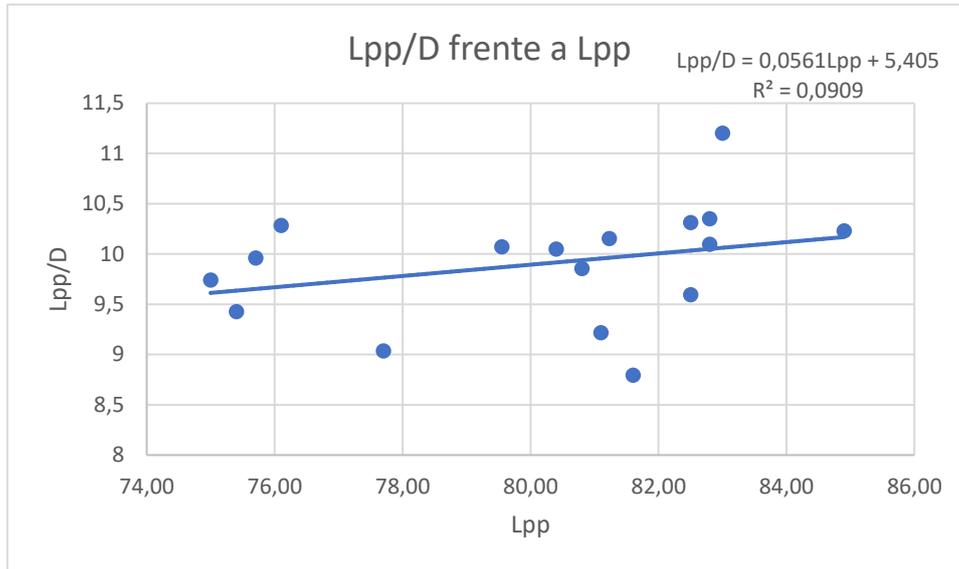

$$T = \frac{19,13}{0,0028 \cdot 19,13 + 2,8192} \rightarrow T = 6,657 \text{ m}$$

El calado usado será la media de ambos: **T = 6,658 m.**

3.4 CÁLCULO DEL PUNTAL

A partir de los valores obtenidos anteriormente se hallarán tres valores del puntal mediante tres regresiones.

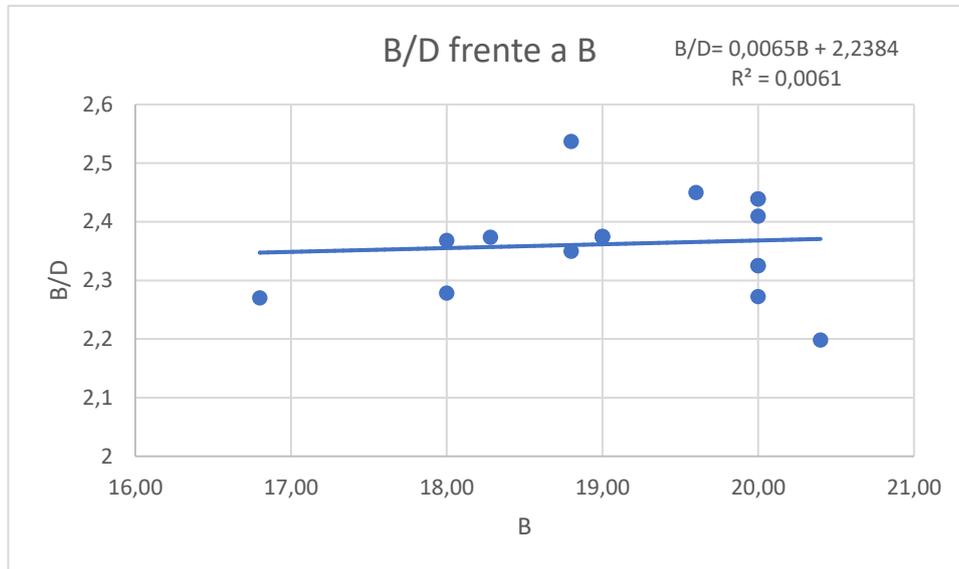

En la primera se representa L_{pp}/D frente a L_{pp} :

$$L_{pp}/D = 0,0561 \cdot L_{pp} + 5,405$$

$$D = \frac{80,19}{0,0561 \cdot 80,19 + 5,405} \rightarrow D = 8,097 \text{ m}$$

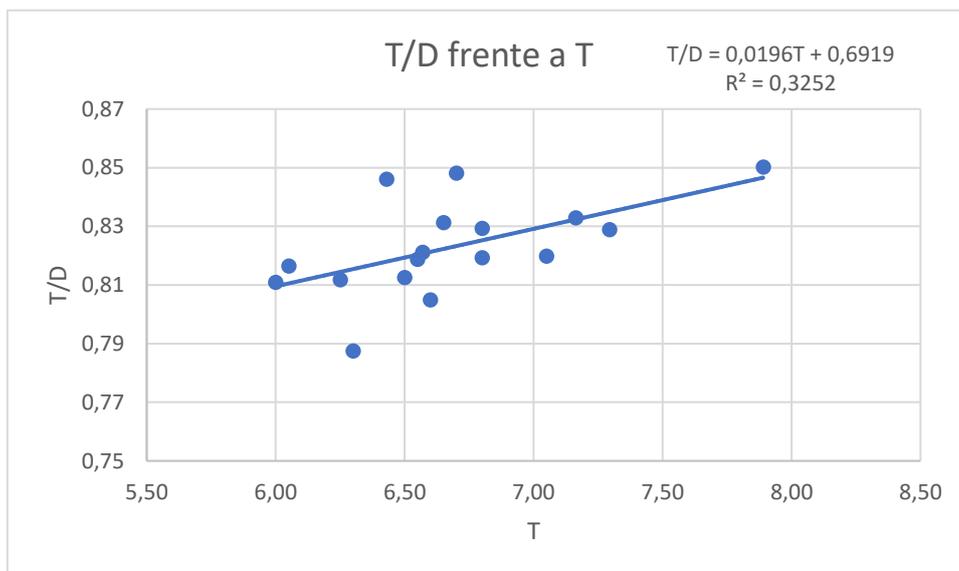

En la segunda se representa B/D frente a B:

$$B/D = 0,0065 \cdot B + 2,2384$$

$$D = \frac{19,13}{0,0065 \cdot 19,13 + 2,2384} \rightarrow D = 8,095$$

En la tercera se representa T/D frente a T:

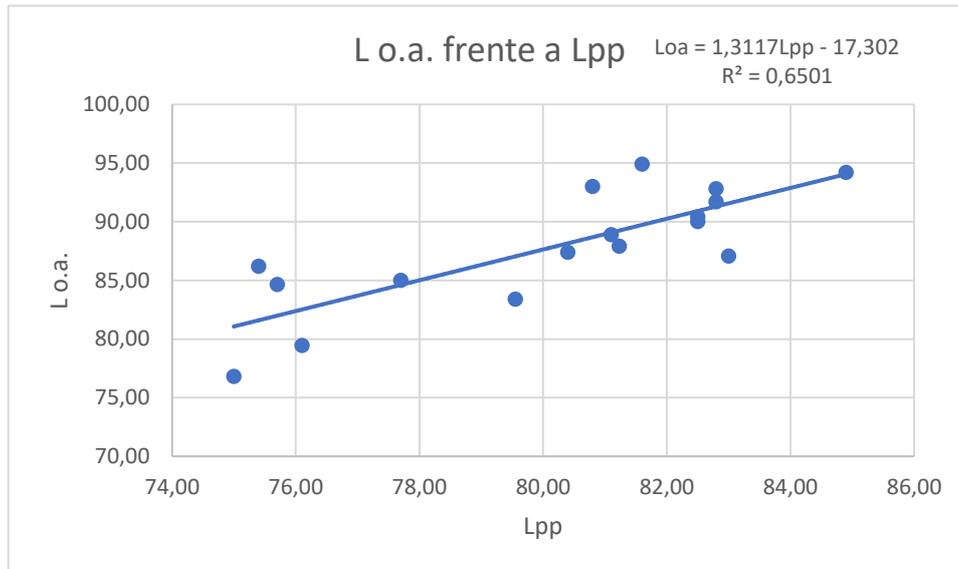

$$T/D = 0,0196 \cdot T + 0,6919$$

$$D = \frac{6,66}{0,0196 \cdot 6,66 + 0,6919} \rightarrow D = 8,096 \text{ m}$$

El puntal usado será la media de estos tres valores: **D = 8,096 m.**

3.5 CÁLCULO DE LA ESLORA TOTAL

Mediante el valor obtenido de la eslora entre perpendiculares se puede obtener la eslora total con la representación de L_{oa} frente a L_{pp} :

$$L.o.a. = 1,3117 \cdot L_{pp} - 17,302 = 1,3117 \cdot 80,19 - 17,302$$

$$L.o.a. = 87,88 \text{ m}$$

3.6 DIMENSIONES PRINCIPALES OBTENIDAS

Con estas regresiones, por lo tanto, hemos obtenido las siguientes dimensiones principales:

Toneladas de peso muerto (RPA)	5000 t
Eslora total	87,88 m
Eslora entre perpendiculares	80,19 m
Manga	19,13 m
Puntal	8,096 m
Calado	6,658 m

4 CÁLCULO DE COEFICIENTES

En este apartado se realizará el cálculo de los coeficientes dimensionales del buque, según diferentes formulaciones obtenidas de los apuntes de Proyectos del buque y Artefactos Marinos I.

Estos coeficientes indicarán las formas generales del buque además de dar ciertas características de cómo será el buque.

4.1 NÚMERO DE FROUDE

Se calculará mediante la fórmula de Froude, teniendo en cuenta que la velocidad que se usará será la de servicio en m/s:

$$Fn = \frac{V}{\sqrt{g \cdot L}} = \frac{13 \cdot 0,51444}{\sqrt{9,81 \cdot 80,19}} \rightarrow Fn = 0,238$$

4.2 COEFICIENTE DE BLOQUE

En este caso se utilizarán varias fórmulas de diferentes autores:

S/ Schneekluth:

$$Cb = \frac{0,14}{Fn} \cdot \frac{Lpp/B + 20}{26} = \frac{0,14}{0,238} \cdot \frac{80,19/19,13 + 20}{26} \rightarrow Cb = 0,546$$

S/ Towsin:

$$Cb = 0,7 + 0,125 \cdot \arctg [25 \cdot (0,23 - Fn)] = 0,7 + 0,125 \cdot \arctg [25 \cdot (0,23 - 0,238)] \\ Cb = 0,674$$

S/ Alexander:

$$Cb = K - \frac{0,5 \cdot V}{\sqrt{3,28 \cdot Lpp}}$$

La constante K se obtiene mediante los datos de la gráfica haciendo el cálculo de:

$$\frac{V}{\sqrt{3,28 \cdot Lpp}} = \frac{13}{\sqrt{3,28 \cdot 80,19}} = 0,801$$

Con el cuál, entrando en la gráfica, se obtiene una $K = 1,055$ y obtenemos un $Cb = 0,654$

S/ Van Lammeren:

$$Cb = 1,37 - 2,02 \cdot Fn = 1,37 - 2,02 \cdot 0,238 \rightarrow Cb = 0,888$$

S/ Minorsky:

$$Cb = 1,22 - 2,38 \cdot Fn = 1,22 - 2,38 \cdot 0,238 \rightarrow Cb = 0,652$$

S/ Ayre (para velocidad en servicio y buques de dos hélices):

$$Cb = 1,06 - 1,68 \cdot Fn = 1,06 - 1,68 \cdot 0,238 \rightarrow Cb = 0,659$$

S/ Katsoulis:

$$Cb = 0,8217 \cdot f \cdot Lpp^{0,42} \cdot B^{-0,3072} \cdot T^{0,1721} \cdot V^{-0,6135}$$

El factor f se calcula mediante el buque de la base de datos *MV Juanita* ya que se tienen todas sus dimensiones y el coeficiente de bloque, que es $C_b = 0,747$, por lo que despejando la f de la fórmula se obtiene un valor de $f = 1,233$.

Sustituyendo se obtiene un $C_b = 0,742$.

Como se observa se obtienen valores muy diferentes según la fórmula que se aplique. En este caso, como se dispone de un buque en la base de datos con dimensiones parecidas al de este proyecto y se tienen suficientes datos como para hacer un cálculo a través de él, se elegirá el coeficiente de bloque de la fórmula de Katsoulis ya que el valor se asemeja bastante a la realidad:

$$C_b = 0,742$$

4.3 COEFICIENTE DE LA SECCIÓN MEDIA O DE LA MAESTRA

Para calcular el coeficiente de la maestra se hará lo mismo que con el coeficiente de bloque, usando fórmulas de diferentes autores y eliminado los valores que se desvíen mucho de la media.

S/ Kerlen:

$$C_m = 1,006 - 0,0056 \cdot C_b^{-3,56} = 1,006 - 0,0056 \cdot 0,742^{-3,56} \rightarrow C_m = 0,990$$

S/ El HSVA:

$$C_m = \frac{1}{1 + (1 + C_b)^{3,5}} = \frac{1}{1 + (1 + 0,742)^{3,5}} \rightarrow C_m = 0,991$$

S/ T. Torroja (Fn<0,5):

$$C_m = 1 - 2 \cdot Fn^4 = 1 - 2 \cdot 0,238^4 \rightarrow C_m = 0,993$$

S/ M. Meizoso:

$$C_m = 1 - 0,062 \cdot Fn^{0,792} = 1 - 0,062 \cdot 0,238^{0,792} \rightarrow C_m = 0,980$$

Haciendo la media de todos estos valores se obtiene un coeficiente de la maestra:

$$C_m = 0,989$$

4.4 COEFICIENTE PRISMÁTICO

Sabiendo la relación entre los anteriores coeficientes:

$$C_b = C_p \cdot C_m$$

Y despejando el coeficiente prismático se obtiene un valor de:

$$C_p = \frac{C_b}{C_m} = \frac{0,742}{0,983}$$

$$C_p = 0,750$$

4.5 COEFICIENTE DE LA FLOTACIÓN

Una vez calculados el coeficiente de bloque, el coeficiente de la maestra y el coeficiente prismático, el coeficiente de la flotación queda condicionado.

$$C_f = 1 - 0,3 \cdot (1 - C_p) = 1 - 0,3 \cdot (1 - 0,671) \rightarrow C_f = 0,925$$

$$Cf = Cb + 0,1 = 0,742 + 0,1 \rightarrow Cf = 0,842$$

S/ Schneekluth (secciones normales):

$$Cf = \frac{1 + 2 \cdot Cb}{3} = \frac{1 + 2 \cdot 0,742}{3} \rightarrow Cf = 0,829$$

S/J. Torroja (para forma U):

$$Cf = 0,248 + 0,049 \cdot G + (0,778 - 0,035 \cdot G) \cdot Cb \quad G = 0 \text{ para formas U}$$

$$Cf = 0,248 + 0,778 \cdot 0,660 \rightarrow Cf = 0,825$$

En este caso, como se observa en el Cuaderno 3, el valor que más se asemeja a la realidad del buque proyecto es el primero, por lo que la primera fórmula es una buena aproximación para el buque de suministro:

$$Cf = 0,925$$

4.6 CÁLCULO DEL DESPLAZAMIENTO

Por último, aunque no es un coeficiente, se hallará el valor del desplazamiento del buque mediante la fórmula siguiente:

$$\Delta = \rho \cdot Cb \cdot (1 + s) \cdot L \cdot B \cdot T$$

Donde $\rho \cdot (1+s) = 1,030$, y que $\rho = 1,025 \text{ t/m}^3$ y s tiene un valor típico del 5%.

$$\Delta = 1,030 \cdot 0,742 \cdot 80,19 \cdot 19,13 \cdot 6,658 \rightarrow \Delta = 7764 \text{ t}$$

5 CÁLCULO DE LA CIFRA DE MÉRITO Y SELECCIÓN DE ALTERNATIVAS

En este apartado se determinará la mejor alternativa de dimensionamiento en función de una cifra de mérito. En este caso la cifra de mérito es el coste construcción, el cual se quiere reducir todo lo posible sin que el buque pierda ninguna de las funcionalidades para las que ha sido proyectado.

Todas las fórmulas utilizadas en este apartado son las indicadas en las diapositivas de la asignatura de Proyectos del Buque y Artefactos Marinos I.

Por lo tanto, el coste de construcción (CC) viene dado por la siguiente fórmula:

$$CC = CMg + CEq + CMo + CVa$$

Donde:

CMg: coste de materiales a granel

CEq: coste de los equipos del buque

CMo: coste de la mano de obra

CVa: coste de gastos varios en los que pueda incurrir el astillero, como Sociedades de Clasificación, ensayos en el canal, etc.

5.1 CÁLCULO DEL COSTE DE LOS MATERIALES A GRANDEL

El coste de los materiales a granel viene dado por la siguiente fórmula:

$$CMg = cmg \cdot PS = ccs \cdot cas \cdot cem \cdot ps \cdot PS$$

Donde:

cmg: coeficiente de costo de materiales a granel

PS: peso de aceros del buque

Para el cálculo del peso del acero se usará la fórmula de Osorio encontrada en el libro de Proyectos de Buques y Artefactos del profesor Fernando Junco:

$$PS = \left(\frac{Lpp}{10}\right)^{1,3760} \cdot \left(\frac{B \cdot D}{100}\right)^{0,7449} \cdot (0,0542 - 0,0017 \cdot Cb) \cdot 1000$$

Sustituyendo obtendremos un valor de:

$$PS = 1286,10 t$$

Para realizar el cálculo del cmg, se descompone en:

ccs: coeficiente ponderado de chapa y acero de distintas calidades

$$1,05 < ccs < 1,10 - 1,50 \rightarrow ccs = 1,30$$

cas: coeficiente de aprovechamiento de acero

$$1,08 < cas < 1,15 \rightarrow cas = 1,11$$

cem: incremento por equipo metálico incluido en la estructura, como barandillas, escotillas, etc.

$$1,03 < cem < 1,10 \rightarrow cem = 1,07$$

ps: precio unitario del acero $\approx 450\text{€/t}$

Para elegir el valor de esos coeficientes se ha usado como referencia los apuntes de la asignatura de Proyectos del buque.

Por lo tanto, el coste de materiales a granel será:

$$CMg = 1,30 \cdot 1,11 \cdot 1,07 \cdot 450 \cdot 1289,48 \rightarrow CMg = 893.587,27 \text{ €}$$

5.2 CÁLCULO DEL COSTE DE LOS EQUIPOS

El coste de los equipos viene dado por la siguiente fórmula:

$$CEq = CEc + CEp + CHf + CEr$$

Donde:

CEc: coste de los equipos de manipulación de la carga

CEp: coste de los equipos de propulsión y su montaje

CHf: coste de habilitación y su montaje

CEr: coste de equipo restante

Como en este caso no hay ninguna forma de estimación del coste de los equipos de manipulación de la carga en este punto del proyecto, su coste no se aplicará.

El cálculo del coste de los equipos de propulsión se desglosa en:

$$CEp = cep \cdot BP$$

Donde:

cep: coste por unidad de potencia de equipos de propulsión

$$300 < cep < 400 \frac{\text{€}}{\text{Kw}} \rightarrow cep = 350$$

BP: potencia propulsora total

Para el cálculo de la potencia propulsora se utilizará la fórmula de Watson:

$$BP = \frac{C \cdot \Delta^{2/3} \cdot \left(40 - \frac{Lpp}{61} + 400 \cdot (K - 1)^2 - 12 \cdot Cb\right)}{15000 - 1,81 \cdot N \cdot Lpp^{0,5}} \cdot V^3$$

Donde:

C: constante dependiente del tipo de buque

Para calcularla, se usará el barco de la base de datos *MV Juanita*, ya que se conoce su potencia propulsora, $BP = 6793,2 \text{ CV}$, y todos los demás datos necesarios. Por tanto, sustituyendo en la fórmula y despejando: $C = 2,342$.

K: constante hallada mediante la fórmula de Alexander

$$K = Cb + \frac{0,5 \cdot V}{\sqrt{3,28 \cdot Lpp}} \rightarrow K = 1,143$$

N: número de revoluciones de la hélice

Como el valor no es conocido se estimará como 150 rpm.

V: velocidad de servicio

Con lo que obtenemos un valor de BP = 6085,24 CV

$$CEp = 350 \cdot 6085,24 = 2.129.833,18 \text{ €}$$

El cálculo del coste de habilitación se desglosa en:

$$CHf = chf \cdot nch \cdot NT$$

Donde:

chf: coeficiente unitario de la habilitación por tripulante $\approx 33.000 \text{ €/tripulante}$

nch: coeficiente de nivel de calidad de la habilitación

$$0,90 < nch < 1,20 \rightarrow nch = 1,15$$

NT: número de tripulantes = 35 tripulantes (RPA)

$$CHf = 33.000 \cdot 1,15 \cdot 35 = 1.328.250 \text{ €}$$

El cálculo del coste de los equipos restantes:

$$CEr = ccs \cdot ps \cdot PEr$$

Donde:

ccs: coeficiente ponderado de chapa y acero de distintas calidades

$$1,05 < ccs < 1,10 - 1,50 \rightarrow ccs = 1,30$$

ps: precio unitario del acero $\approx 450\text{€/t}$

PEr: peso de equipo restante

$$PEr = K \cdot Lpp^{1,3} \cdot B^{0,8} \cdot D^{0,3}$$

$$0,03 < K < 0,05 \rightarrow K = 0,04$$

$$PEr = 237,23 \text{ t}$$

Por lo que:

$$CEr = 1,30 \cdot 450 \cdot 237,23 = 138.781,85 \text{ €}$$

Entonces, el coste total de los equipos será:

$$CEq = 2.129.833,18 + 1.328.250 + 138.781,85 \rightarrow CEq = 3.596.865,03 \text{ €}$$

5.3 CÁLCULO DEL COSTE DE LA MANO DE OBRA

El coste de la mano de obra viene dado por la siguiente fórmula:

$$CMo = chm \cdot csh \cdot PS$$

Donde:

chm: costo horario medio del astillero

$$21/25 < chm < 10/40 \text{ €/hora} \rightarrow chm = 30$$

csh: coeficiente de horas por unidad de peso

$$20/30 < csh < 80/100 \text{ €/hora} \rightarrow csh = 90$$

PS: peso de aceros del buque = 1286,10 t

Por lo tanto, el coste de la mano de obra:

$$CMo = 30 \cdot 90 \cdot 1286,10 \rightarrow \mathbf{CMo = 3.472.466,91 \text{ €}}$$

5.4 CÁLCULO DEL COSTE DE GASTOS VARIOS

El coste de gastos varios viene dado por la siguiente fórmula:

$$CVa = cva \cdot CCo$$

Donde:

cva: 8% del coste de construcción

CCo: coste de construcción antes de gastos varios

$$CCo = CMg + CEq + CMo = 7.962.912,21 \text{ €}$$

Por lo que:

$$CVa = 0,08 \cdot 7.962.912,21 \rightarrow \mathbf{CVa = 637.033,54 \text{ €}}$$

5.5 CÁLCULO DEL COSTE DE CONSTRUCCIÓN TOTAL

El coste de construcción total será la suma de todos los costes calculados anteriormente, dando un resultado de:

$$\mathbf{CC = 8.599.952,75\text{€}}$$

5.6 OPTIMIZACIÓN DE LA ALTERNATIVA INICIAL

Después de haber calculado el coste de construcción total con las dimensiones obtenidas anteriormente, se va a realizar la optimización de estas dimensiones para así intentar reducir la cifra de mérito, es decir, el coste de construcción.

Para realizarlo, se hará lo siguiente:

- Variar la eslora entre perpendiculares un $\pm 10\%$, obteniendo:
 - un valor mínimo de 72,17 m,
 - un valor máximo de 88,21 m y,
 - en cada iteración una variación de 1,60 m.

- Para cada valor de eslora se hará variar la manga un $\pm 10\%$, obteniendo:
 - un valor mínimo de 17,21 m,
 - un valor máximo de 21,04 m y,
 - en cada iteración una variación de 0,38 m.

- Para cada valor de manga se hará variar el coeficiente de bloque un $\pm 3\%$, obteniendo:
 - un valor mínimo de 0,720,
 - un valor máximo de 0,764 y,
 - en cada iteración una variación de 0,004.

- El calado variará con la fórmula:

$$T = \frac{\Delta}{1,25 \cdot Lpp \cdot B \cdot Cb}$$

- El puntal variará con la relación:

$$D = \frac{Lppinicial \cdot Binicial \cdot Dinicial}{Lpp \cdot B}$$

Además de estos datos se añadirán también los costes, ya que están relacionados con las dimensiones principales, para así poder observar los cambios que sufren al variarlas.

También se añadirán las relaciones adimensionales usadas en el dimensionamiento con una serie de restricciones, obtenidas de la base de datos, para poder elegir una alternativa que sea coherente con los buques que existen actualmente.

Se ha sido más restrictivo con el L/T ya que es el valor con más volatilidad, por tanto, se ha disminuido el rango para obtener resultados más favorables

Las restricciones usadas son:

$$4,000 < \frac{L}{B} < 4,530$$

$$8,973 < \frac{L}{D} < 10,284$$

$$11,119 < \frac{L}{T} < 12,689$$

$$2,198 < \frac{B}{D} < 2,537$$

$$2,586 < \frac{B}{T} < 3,107$$

$$0,787 < \frac{T}{D} < 0,850$$

Utilizando siempre la eslora entre perpendiculares.

Para hacer variar el desplazamiento se ha usado la fórmula:

$$\Delta = \Delta_{inicial} + DPS + DPEr + DPMAq$$

Donde:

DPS: diferencia de peso del acero, PS alternativas – PS inicial

DPer: diferencia de peso del equipo restante, PEr alternativas – PEr inicial

DPMAq: diferencia de peso de la maquinaria, PMAq alternativas – PMAq inicial

$$PMAq = 0,075 \cdot MCR(Kw) + 300$$

El peso en rosca se calcula mediante la fórmula:

$$PR = \Delta - PM$$

Se restringirá también el coste de construcción total para que no pueda ser mayor al obtenido previamente:

$$CC < 8.599.952,75 \text{ €}$$

Se tiene en cuenta que:

$$L \cdot B \cdot T > 5000$$

Una vez aplicados todos estos filtros se han obtenido un total de 42 alternativas, de las cuáles las 25 más baratas son:

23	78,58	85,78	19,51	0,733	6,733	8,099	4,028	9,703	11,671	2,409	2,897	0,831	7.754	2.754	5.000	8.525.946,63 €
24	78,58	85,78	19,51	0,724	6,798	8,099	4,028	9,703	11,560	2,409	2,870	0,839	7.734	2.734	5.000	8.526.420,97 €
25	78,58	85,78	19,51	0,720	6,841	8,099	4,028	9,703	11,488	2,409	2,852	0,845	7.734	2.734	5.000	8.526.667,60 €

Como mejor alternativa no se ha elegido la más barata, si no en la cual el L/T se asemeje más al valor medio de la base de datos, que es 12.

Así, las nuevas dimensiones y los nuevos coeficientes serán:

$L_{pp} = 78,58 \text{ m}$
$Loa = 85,78 \text{ m}$
$B = 19,13 \text{ m}$
$T = 6,578 \text{ m}$
$D = 8,261 \text{ m}$
$BHP = 6.094 \text{ CV} = 4.480 \text{ kW}$
$\Delta = 7.742 \text{ t}$
$F_n = 0,241$
$C_b = 0,764$
$C_m = 0,989$
$C_p = 0,772$
$C_f = 0,925$
$Acubierta = 0,7 \cdot L_{pp} \cdot 0,9 \cdot B = 947 \text{ m}^2$

El valor del coste de construcción total se ha reducido en:

$$Ahorro = 8.562.581,90 \text{ €} - 8.489.946,30 \text{ €} = 110.006,44 \text{ €}$$

Aún sin ser la mejor alternativa en cuestión de coste se ha obtenido bastante reducción en el mismo.

6 PREDICCIÓN DE POTENCIA

Para la predicción de potencia se usará el programa NavCad, del cual se obtendrá la resistencia al avance, la potencia propulsora y la hélice.

Para los cálculos se han usado los siguientes datos:

Project

Para el cálculo de la resistencia se ha usado el método Holtrop, obteniendo como resultados una resistencia de 174,35 kN.

Ahora, para los cálculos de la hélice se ha introducido el diámetro utilizando como guía los planos del buque base y se ha optado por una hélice de 4 palas ya que al hacer los cálculos era la que ofrecía un mejor rendimiento.

Como se observa a continuación obtenemos:

- el ratio del área expandida y,
- el paso de la hélice.

Se ha usado el método de predicción Holtrop, fijando las RPM del motor a 1200, siendo estas las del buque base.

Por lo que se obtiene, para la velocidad de servicio, una potencia de 1984,7 kW.
Se adjuntan como anexo todos los informes obtenidos en NavCad.

7 VALIDACIÓN TÉCNICA DE LA SOLUCIÓN MÁS FAVORABLE

En este apartado se realizará el cálculo preliminar de los pesos del buque de forma que se pueda validar la alternativa que se ha obtenido anteriormente.

7.1 ESTUDIO DEL PESO MUERTO

Como en el peso muerto es un dato fijado en las RPA debemos valorar, a partir de este, el resto de partidas del buque, que se dividen en:

- Carga útil
- Consumos
- Tripulación
- Pertrechos

7.1.1 Consumos

Los consumos se dividirán en:

- Combustible
- Aceite
- Agua dulce
- Víveres

Todos los consumos se calcularán para la autonomía de 6000 millas a la velocidad de servicio, definida en la RPA.

Combustible:

Respecto al combustible se utilizan dos tipos de combustible, diésel para la navegación y LNG para estancias en puerto, por lo que hay que calcular ambas partidas por separado.

Para el diésel, el consumo específico suele ser 190 – 217 g/kW·h, se cogerá el valor medio:

$$\text{Consumo específico} = \frac{190 + 217}{2} = 203 \frac{g}{kW \cdot h}$$

Por lo que, el consumo del combustible será:

$$\text{Consumo DO} = \frac{6000 \text{ millas}}{13 \text{ nudos}} \cdot \frac{203 \text{ g}}{kW \cdot h} \cdot 1984,7 \text{ kW} \cdot \frac{1 \text{ t}}{10^6 \text{ g}} \cdot 0,85 = 158 \text{ t}$$

Para el gas natural licuado, el consumo específico es de 162,17 g/kW·h. Como solo se usará el LNG en las estancias en puerto, se estimará que el buque pasará 5 días en puerto.

$$\text{Consumo LNG} = 5 \text{ días} \cdot 24 \text{ horas} \cdot \frac{162,17 \text{ g}}{kW \cdot h} \cdot 1984,7 \text{ kW} \cdot \frac{1 \text{ t}}{10^6 \text{ g}} \cdot 0,85 = 11,6 \text{ t}$$

Aceite:

Para el cálculo del aceite, no hay suficientes datos para en esta fase del proyecto, ya que la cantidad que se transporta están recomendadas por los suministradores de los equipos. Por lo tanto, se usará la estimación de que el aceite transportado es un 3% al peso de combustible de propulsión:

$$0,03 \cdot 158 + 0,03 \cdot 32,83 = 5,72 \text{ t}$$

Agua dulce:

En esta partida solo se añadirá el agua dulce usada para consumo propio, no se añade el agua que el buque entrega a la plataforma.

La estimación se hará con unos 175 litros por persona y por día, quedando:

$$175 \text{ litros} \cdot 35 \text{ personas} \cdot \frac{6000}{13 \cdot 24} \text{ días} = 117,79 \text{ t}$$

Víveres:

En esta partida de proyectos, en el libro de Proyectos del Buque se recomienda 5 kg por persona y día en buques mercantes y 15 kg por persona y día en buques de pasaje.

Este proyecto no se considera un buque de pasaje, pero como existe un transporte de personal hacia la plataforma, se usará el valor medio de ambos valores: 10 kg.

$$5 \text{ kg} \cdot 35 \text{ personas} \cdot \frac{6000}{13 \cdot 24} \text{ días} = 3,36 \text{ t}$$

Sumando todas las partidas:

$$\text{Consumos} = 158 + 11,6 + 6,71 + 134,62 + 3,36 = 314,29 \text{ t}$$

7.1.2 Tripulación y pasaje

Según el libro de Proyectos del Buque para calcular el peso de la tripulación y pasaje se considerará 125 kg por tripulante y 125-200 kg por pasaje. Como en las RPA no se distingue si las 35 personas son tripulante o pasaje se determinará que 25 personas son tripulantes y las 10 personas restantes son personal de la plataforma, que se tomará como pasajeros, por lo que:

$$125 \text{ kg} \cdot 25 \text{ personas} = 3,125 \text{ t}$$

$$200 \cdot 10 \text{ personas} = 2 \text{ t}$$

7.1.3 Pertrechos

Esta cifra, según el libro, es variable y el campo de variación es entre 10 t y 100 t según el tamaño del buque.

Para el buque proyecto se elegirá un valor de 40 t ya que no es un barco excesivamente grande.

7.1.4 Carga útil

Por tanto, después de haber hecho todos los cálculos y teniendo en cuenta que el peso muerto se marca mediante RPA (5000 TPM), se calculará la carga útil:

$$\text{Carga útil} = \text{Peso Muerto} - \text{Consumos} - \text{Tripulación y Pasaje} - \text{Pertrechos}$$

$$\text{Carga útil} = 4586,525 \text{ t} \cong 4587 \text{ t}$$

7.2 PESO EN ROSCA

Según el libro de Proyecto del Buque para hacer el cálculo del peso en rosca en un buque de suministro, puede ser calculado de la siguiente manera:

$$\text{Peso en Rosca} = \text{Pacero} + \text{Pmaquinaria} + \text{Pequipo}$$

$$\text{Peso en Rosca} = 0,14 \cdot L \cdot B \cdot D + 0,03 \cdot BHP + 0,045 \cdot L \cdot B \cdot D$$

$$\text{Peso en Rosca} = 0,14 \cdot 78,58 \cdot 19,13 \cdot 8,261 + 0,03 \cdot 2007 + 0,04 \cdot 78,58 \cdot 19,13 \cdot 8,261$$

$$\text{Peso en Rosca} = 2295,5 \text{ t} \cong 2296 \text{ t}$$

Ahora, con el peso en rosca y con el peso muerto se calculará el desplazamiento:

$$\Delta = P_{\text{muerto}} + P_{\text{rosca}} = 5000 + 2296$$

$$\Delta = 7.296 \text{ t} < 7.742 \text{ t}$$

Se observa que, comparándolo con el desplazamiento obtenido en las alternativas, se obtiene un margen de 446 t que ese podría meter de carga o para pesos no contemplados en las partidas.

Haciendo un cálculo paralelo con la potencia a 15 nudos de 4917 kW se observa que todavía se obtiene un margen bastante respetable, ya que:

$$\text{Peso en Rosca} = P_{\text{acero}} + P_{\text{maquinaria}} + P_{\text{equipo}}$$

$$\text{Peso en Rosca} = 0,14 \cdot L \cdot B \cdot D + 0,03 \cdot BHP + 0,045 \cdot L \cdot B \cdot D$$

$$\text{Peso en Rosca} = 0,14 \cdot 78,58 \cdot 19,13 \cdot 8,261 + 0,03 \cdot 4917 + 0,04 \cdot 78,58 \cdot 19,13 \cdot 8,261$$

$$\text{Peso en Rosca} = 2382,79 \text{ t} \cong 2383 \text{ t}$$

$$\Delta = P_{\text{muerto}} + P_{\text{rosca}} = 5000 + 2383$$

$$\Delta = 7.383 \text{ t} < 7.742 \text{ t}$$

Se obtiene un margen de 359 t.

8 FRANCOBORDO

Para hacer el cálculo del francobordo se va utilizar como herramienta el Excel proporcionado en la asignatura de Proyectos, el cual está hecho basándose en el Convenio Internacional de Líneas de Carga.

Solo se indicarán las reglas aplicables.

Los datos para utilizar son:

INTERNATIONAL CONVENTION ON LOAD LINES 1966/1988

Moulded Breadth (B)	19,13 m
Least Moulded Depth	8,261 m
85% Least Moulded Depth	7,022 m
Freeboard deck thickness at side	10 mm
Freeboard Depth (D)	8,271 m
Length of the waterline at 7,022 m of depth	84,59 m
Length betw. Perp. at 7,022 m of depth	77,51 m
Freeboard Length (L)	81,206 m
Volume without appendages at 7,022 m of depth	8334,07247 m ³
Block coefficient	0,764

8.1 TIPO DE BUQUE

Según el Convenio Internacional sobre Líneas de Carga:

Un buque tipo A “será el que haya sido proyectado para transportar solamente cargas líquidas a granel”.

Un buque tipo B serán “los buques que no se ajusten a lo dispuesto para los buques de tipo A”

Por lo que, el buque proyecto será claramente de tipo B, porque, aunque se transporten cargas líquidas a granel también se transporta carga sólida.

8.2 TABLAS DE FRANCOBORDO

El francobordo tabular será diferente según el tipo de buque, ya que se determina por medio de interpolación con tablas diferentes, por lo que es muy importante tenerlo bien definido.

Para este caso:

R-28 Tabular Freeboard

Applicable

<i>Table</i>	
<i>L</i>	<i>freeboard</i>
81	905
82	923

<i>L</i>	<i>freeboard</i>
81,206	909

R-28	909
------	-----

8.3 CORRECCIÓN PARA BUQUES DE MENOS DE 100 M DE ESLORA

Esta corrección solo se aplica para buques de tipo B.

Para esta corrección se necesita saber las superestructuras que tiene el buque, para esto se utilizará el buque base *Rem Supporter*, que solamente cuenta con castillo de proa de 26,06 m. Para el cálculo se usa la fórmula:

$$7,5 \cdot (100 - L) \cdot \left(0,35 - \frac{E1}{L}\right)$$

R-29 Correction for ships under 100 m in length

Applicable

Effective length of superstructure (E)	26,06 m
Length of trunks	0 m
Effective length of superstructure (E1)	26,06 m

R-29	5
------	---

8.4 CORRECCIÓN POR COEFICIENTE DE BLOQUE

Cuando el coeficiente de bloque es superior a 0,68 el francobordo tabular se modificará según:

$$\frac{Cb + 0,68}{1,36}$$

R-30 Correction for block coefficient

Applicable

R-28	909
R-29	5
<i>freeboard</i>	914

Factor 1,0618

R-30	57
------	----

8.5 CORRECCIÓN POR PUNTAL

Esta corrección se aplicará cuando el puntal exceda $L/15$ y se aumentará en:

$$\left(D - \frac{L}{15}\right) \cdot R \text{ siendo: } R = \frac{L}{0,48}$$

También se aplicará, aunque lo anterior no cumpla, si las superestructuras cerradas cubran al menos una longitud de $0,6 \cdot L$.

R-31 Correction for depth			<i>Applicable</i>
Enclosed superstructure length		26,06 m	<0.6*L
Height of superstructure		8,509 m	
Standard Height		1,862 m	
R	169,1792	Standard Height correction	1
Correction	484		
			R-31 484

8.6 ALTURA NORMAL DE LAS SUPERESTRUCTURAS

La altura se saca mediante interpolación, que en este caso el valor es:

R-33 Standard height of superstructure (in m)	<i>Applicable</i>				
<table border="1"> <thead> <tr> <th><i>Raised quarterdeck</i></th> <th><i>All Other superstructures</i></th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1,274</td> <td style="text-align: center;">1,862</td> </tr> </tbody> </table>	<i>Raised quarterdeck</i>	<i>All Other superstructures</i>	1,274	1,862	
<i>Raised quarterdeck</i>	<i>All Other superstructures</i>				
1,274	1,862				

8.7 LONGITUD NORMAL Y EFECTIVA DE LAS SUPERESTRUCTURAS

En este caso, solo existe castillo de proa, por lo que:

R-34/35 Effective length of superstructure (in m)						<i>Applicable</i>
<i>Superstructure</i>	<i>Length (S)</i>	<i>Sup. br. (b)</i>	<i>Ship br. (Bs)</i>	<i>Height</i>	<i>Effective Length (E)</i>	
Forecastle	26,060	9,565	9,565	2,500	26,060	
<i>centre</i>						
Poop						

<i>Raised quarterdeck</i>	<i>Length (S)</i>	<i>Sup. br. (b)</i>	<i>Ship br. (Bs)</i>	<i>Height</i>	<i>Effective Length (E)</i>

8.8 REDUCCIÓN POR SUPERESTRUCTURAS Y TRONCOS

Como la superestructura es inferior a 1L, la reducción viene tabulada:

R-37 Deduction for superstructures and trunks	<i>Applicable</i>
------------------------------------------------------	-------------------

<i>Length of Superstructure</i>	26,06 m
<i>Length of Trunks</i>	0 m
<i>Effective Length (E)</i>	26,06 m
<i>Effective Length (E)</i>	0,3209 *L
Deduction for 1L	828 mm

E	%
0,3	21
0,3209	23,1
0,4	31

R-37	-192
------	------

8.9 ARRUFO

En este caso no existe arrufo en la cubierta, aunque en este apartado también se aplicará el arrufo existente en las superestructuras

R-38 Sheer	<i>Applicable</i>
-------------------	-------------------

Station	Ordinate	Factor	Product	
After perpendicular	927	1	927	
1/6 L from A.P.	411	3	1233	
1/3 L from A.P.	104	3	312

(over L) 0 *L

Factor 0,589
5 Correction 253 mm

Freeboard correction 253 mm

R-38	253
------	-----

8.10 FRANCOBORDOS MÍNIMOS

Ahora se sumarán todos los apartados anteriores para obtener los diferentes francobordos:

R-40 Minimum freeboards	<i>Applicable</i>
--------------------------------	-------------------

Minimum freeboard without R-32		50 mm	
R-28	909 mm	Freeboard in Salt Water	1516 mm
R-29	5 mm		
R-30	57 mm		
R-31	484 mm		
R-32.1	mm		
R-37	-192 mm	Maximum Scantling Draught	8000 mm
R-38	253 mm	Maximum Stability Draught	7297 mm
Sum	1516 mm		
R-39.1	0 mm		
R-39.2	0 mm		
Sum	1516 mm		
R-32	0 mm		
Displacement at 6,755 m	10816,4 ton		
TPCM at 6,755 m	18,74 ton/cm		

<i>Minimum Summer Freeboard</i>	<i>1516 mm</i>
<i>Maximum Summer Draught</i>	<i>6755 mm</i>
<i>Summer Freeboard</i>	<i>1516 mm</i>
<i>Summer Draught</i>	<i>6755 mm</i>
<i>Tropical Freeboard</i>	<i>1376 mm</i>
<i>Winter Freeboard</i>	<i>1657 mm</i>
<i>Winter N. Atlantic Freeboard</i>	<i>1707 mm</i>
<i>Fresh Water</i>	<i>1502 mm</i>

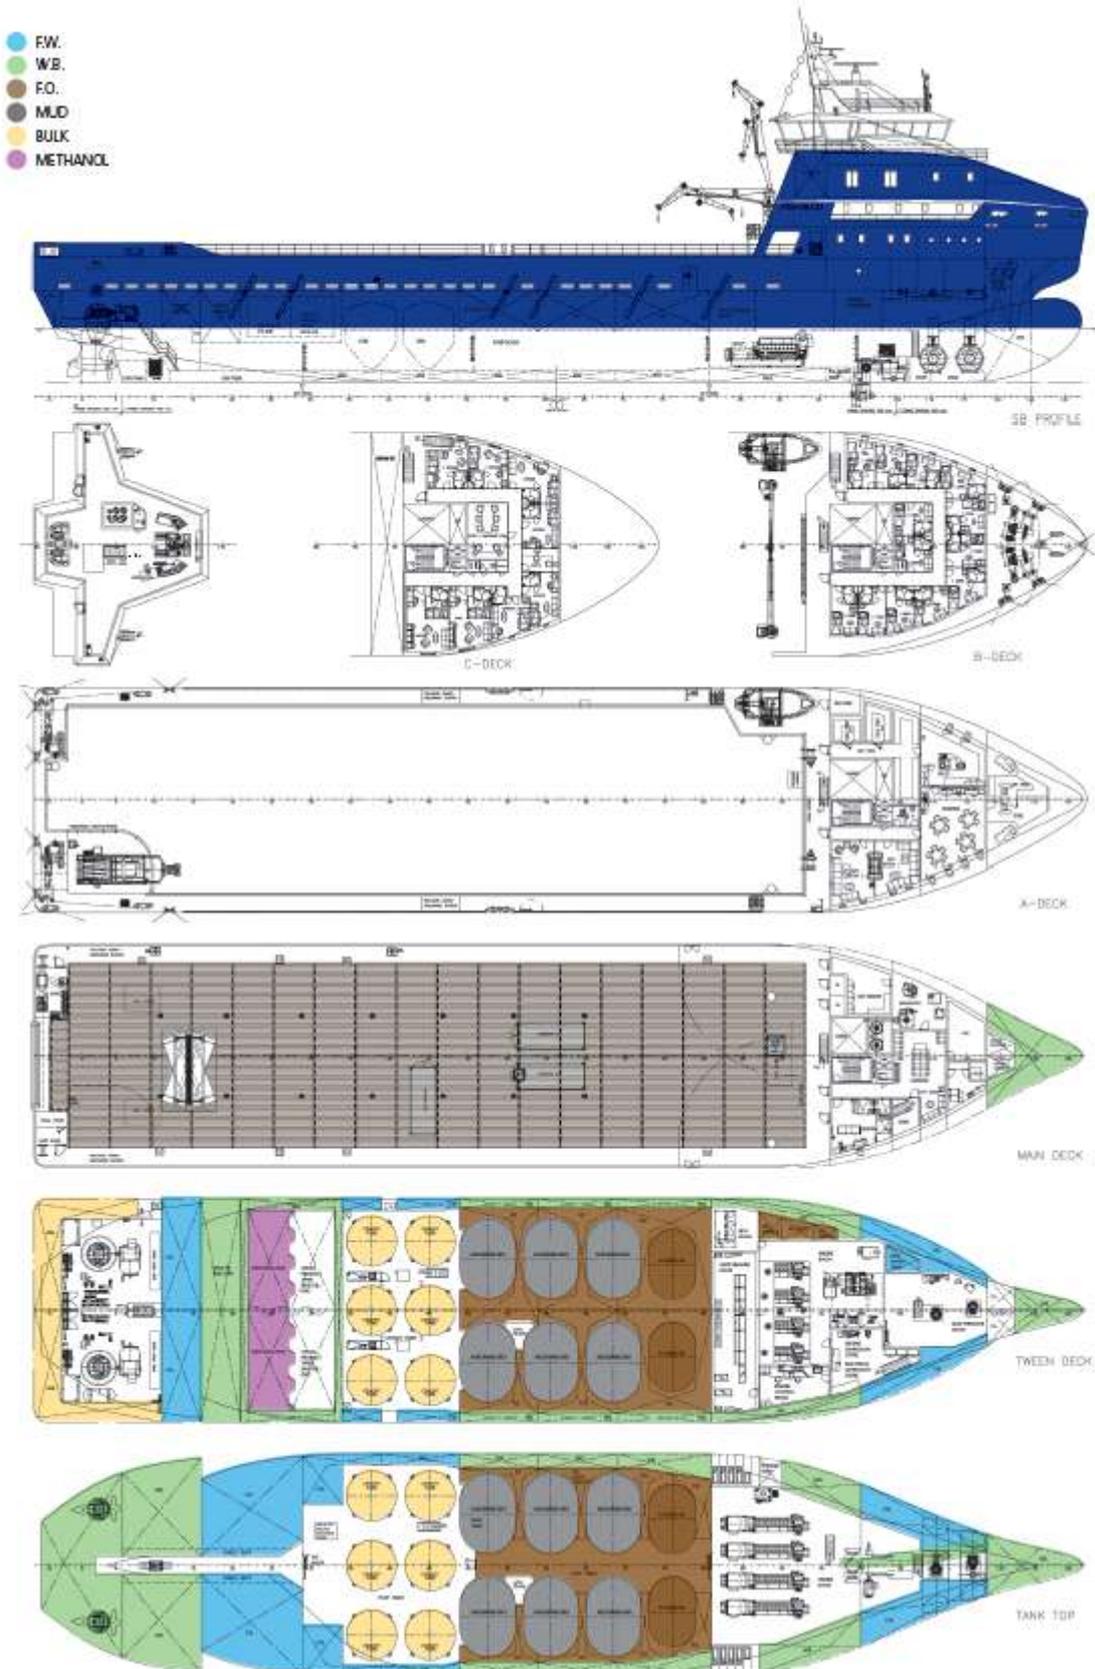

Comparándolo con el francobordo obtenido mediante las alternativas:

$$D - T = 8,261 - 6,578 = 1,683 \text{ m}$$

Que es mayor que el francobordo mínimo de verano, además de que el calado es más alto que el calado mínimo requerido, por lo que el buque proyecto cumple con el francobordo.

9 CROQUIS DE LA DISPOSICIÓN GENERAL

En esta fase del proyecto se tomará la disposición general del buque base *Rem Supporter*:

10 ESPECIFICACIÓN PRELIMINAR

En este apartado se describirán algunos conceptos básicos en la concepción del diseño del buque.

10.1 GENERAL

10.1.1 Tipo de buque

En este proyecto se está diseñando un buque de suministro a plataformas, con capacidad para 35 personas y para albergar tanto carga líquida como seca a granel.

Dispone de una cubierta de carga corrida la cual ha de tener una resistencia tal que pueda albergar diferente tipo de maquinaria, así como materiales. Además, contará con dos grúas en cubierta para los procesos de carga y descarga de la carga seca a granel.

La propulsión del buque será diésel-eléctrica para la navegación y para las estancias en puerto se dispondrá de gas natural licuado. Por lo que el buque estará dotado de motores dual-fuel, para que pueda trabajar tanto con diésel como con gas.

La generación se realizará mediante un motor principal que producirá la potencia necesaria y un generador transformará esa potencia en energía eléctrica. Esta energía eléctrica accionará los motores eléctricos encargados de mover las hélices

Dispondrá de dos hélices azimutales para la propulsión y cuatro para el posicionamiento dinámico, dos a proa y dos a popa.

10.1.2 Características principales

Eslora total = 85,78 m

Eslora entre perpendiculares = 78,58 m

Puntal = 8,261 m

Calado = 6,578 m

Peso muerto = 5000 TPM

Área cubierta = 947 m²

Número de hélices = 2

Tripulación = 35 personas

Clasificación: DNV·GL

El buque tiene una autonomía de 6000 millas, que son unos 19 días de navegación a velocidad de servicio.

Las estancias en puerto serán de 10 días.

10.1.3 Tripulación

Personal a bordo 25 personas:

1 Capitán

1 Jefe de máquinas

1 Primer Oficial

6 Oficiales

16 Marineros

El resto de personas son el personal de la plataforma.

10.1.4 Capacidades

El buque tendrá que llevar tanques para carga seca y líquida, además de tanques de diésel, gas natural licuado, aceites y los tanques de agua de lastre.

10.1.5 Peso muerto

Dentro del peso muerto se incluye:

consumos (combustibles, aceite, agua dulce y víveres),
tripulación y pasaje,
pertrechos y
carga útil.

El peso muerto total será de 5000 TPM.

10.1.6 Formas y estabilidad

Las formas del buque serán completamente en U tanto en proa como en popa.

Está dotado de bulbo en proa.

Debe cumplir con los criterios de estabilidad general, así como con la estabilidad en averías para garantizar la navegación.

10.1.7 Potencia y velocidad

La generación de energía será realizada con motores dual fuel, que funcionen con diésel y con gas natural licuado.

La velocidad del buque en servicio será de 13 nudos, con un margen de mar de 15% y el motor trabaja al 85%. La velocidad máxima que alcanzará será de 15 nudos.

Todavía no se ha elegido un motor pero tendrá que ser uno que de la potencia para la velocidad máxima de 15 nudos, que es de 5000 kW aproximadamente.

10.1.8 Clasificación, inspección y reglamentos de aplicación

El buque será construido de acuerdo con los Reglamentos de Det Norske Veritas · Germanischer Lloyd.

La construcción y el armamento estarán también controlados por el armador, según se especifique en el contrato.

El buque cumplirá, además:

SOLAS

Convenio Internacional de Líneas de Carga

Reglas para prevenir la contaminación del mar MARPOL

Convenio Internacional sobre Arqueo
Normas sobre niveles de ruido y vibraciones

10.2 CASCO

10.2.1 Materiales y tipo de construcción

El caso se construirá con acero naval el cual cumpla lo exigido con la Sociedad de Clasificación.

La estructura será longitudinal, ya que las mayores fuerzas que tendrá que soportar son longitudinales

Las chapas se unirán mediante soldadura.

10.2.2 Cubiertas

La cubierta de carga se calculará de forma que pueda soportar el peso de la maquinaria que se vaya a utilizar.

10.2.3 Superestructuras, mamparos menores, etc.

El castillo de proa también será de acero y también las cubiertas como los mamparos exteriores.

10.3 EQUIPO, ARMAMENTO E INSTALACIONES

10.3.1 Equipo de fondeo amarre y remolque

- 2 anclas
- 2 cabrestantes
- 2 molinetes

10.3.2 Medios de salvamento

Todas estas normas se han obtenido del Capítulo III del SOLAS.

Aros salvavidas: se dispondrán de 10 aros salvavidas distribuidos en ambas bandas del buque (5 a cada banda) y se situarán 2 aros por lo menos un aro con rabiza flotante. La mitad de los aros tendrán luces de encendido automático y estarán también dotados de señales fumígenas.

Chalecos salvavidas: se dispondrán 35 chalecos salvavidas, uno para cada persona que vaya a bordo y se colocarán de modo que sean fácilmente accesibles. Los chalecos irán provistos de luces.

Trajes de inmersión: se dispondrá de un traje de inmersión a cada miembro de la cuadrilla encargada del sistema de evacuación marino.

Para cada persona que vaya a bordo se le indicarán instrucciones para seguir en caso de emergencia.

Se fijarán cuadros de obligaciones para emergencias en lugares visibles en todo el buque.

10.3.3 Alojamiento

El resto de personas será el personal que se transportará hacia la plataforma, por lo que se tomarán como pasajeros.

Los camarotes del Capitán, del Jefe de Máquinas y del Primer Oficial serán iguales y tendrán despacho. Los oficiales dispondrán de camarotes individuales y los marineros de camarotes dobles. Todos los camarotes dispondrán de ase privado.

El personal de plataforma contará con camarotes dobles también con ase.

10.3.4 Aire acondicionado y ventilación

Se dispondrá de aire acondicionado en cada camarote, además también dispondrán de calefacción.

10.3.5 Equipos de navegación y comunicaciones

- Radares, los cuales tendrán un sistema de detección de aceite
- Piloto automático
- Girocompás
- Ecosonda
- Sistema de visualización e información de cartas electrónicas
- Sistema de registro de datos del viaje

Sistema mundial de socorro y seguridad marítimos (GMDSS)

Intercomunicadores

Canal VHF

Televisión e internet mediante VSAT

10.3.6 Medios de contraincendios

Se dispondrá una instalación de agua nebulizada en todo el buque.

En cubierta se dispondrán mangueras.

10.4 INSTALACIÓN PROPULSORA

10.4.1 Motor principal

El generador principal será de dual fuel.

Como combustibles se usará diésel y gas natural licuado.

Todavía no se puede indicar ningún parámetro del motor principal ya que todavía no se ha seleccionado ningún motor específico para este proyecto.

10.4.2 Accesorios del generador

Control: conocer el estado del motor desde lugares remotos del barco, como el puente. El panel de control nos da información acerca de:

- Temperatura del líquido refrigerante

- Temperatura de los gases de escape

- Presión del aceite

- Carga de la batería

- Potencia producida

- Detección de fugas de agua o funcionamientos anómalos

Los módulos de control ayudan a que el equipo pueda entrar en parada de emergencia si alguno de los datos es anómalo y está en un nivel crítico, permitiendo la interrupción del grupo electrógeno.

Los generadores suelen estar dotados de tomas que se pueden acoplar a la toma de mar del buque para así tomar el agua del mismo lugar que el motor principal. El agua de mar no entrará en contacto con las piezas nobles de la máquina para evitar así la corrosión.

10.5 INSTALACIONES ESPECIALES

10.5.1 Grado de automatización

El buque dispondrá de una cabina de control de máquinas y un centro de control en el puente de gobierno.

10.5.2 Instrumentación general

Sistema de detección de incendios: el panel central de alarma estará en el puente. En la zona de personal de la plataforma se instalará un sistema automático de detección y alarma que cumpla con SOLAS. En los espacios de máquinas se instalará un sistema de detección de incendios mediante detectores de humo que se hará visible en el puente mediante alarmas ópticas y acústicas.

Sistema de alarma general: Se instalará un sistema completo de alarma general controlado desde el puente, con sirenas en cámara de máquinas.

Sistemas de alarmas centralizadas: las alarmas se manifestarán cuando algún sensor detecte situación de alarma.

10.5.3 Control de la planta generadora principal

Los generadores principales dispondrán de un equipo automático de control que permitirá su arranque, lubricación, acoplamiento al cuadro principal y reparto de cargas automáticos.

10.5.4 Posicionamiento dinámico

El posicionamiento dinámico tiene como objetivo mantener al buque en una posición exacta mediante hélices, propulsores y demás sistemas

Sistemas de posición: debido a la alta precisión que se necesita en el funcionamiento del posicionamiento dinámico son varios los sistemas empleados. Además, contra más número de sistemas se usen, mayor será la precisión aplicada.

En este proyecto el buque contará con sistemas de satélites (DGPS VERIPOS) y con sensor láser (CyScan).

Sistemas de medición externos: estos sensores son los encargados de medir el abatimiento producido por el viento, la deriva creada por la corriente y la amplitud culpable del oleaje. Todos están contruidos a partir de unidades de medidas de inercias, que determinan el grado a corregir para los movimientos de rotación del buque.

Equipos de propulsión y gobierno: son los encargados de crear el empuje necesario para contrarrestar las fuerzas externas y guiar al buque.

En este proyecto se usan propulsores azimutales, tanto en proa como en popa.

Sistemas de control: es el algoritmo usado por el sistema informático basado en las mediciones de los sensores externos.

El posicionamiento dinámico será de clase DP3, esto es que cuenta con una gran redundancia para que en caso de avería pueda seguir manteniendo la posición con normalidad para así poder abandonar la operación de una forma controlada y segura.

10.5.5 Capacidad de lucha contraincendios (FIFI)

El buque llevará tanto protección pasiva como activa:

Monitor de protección FIFI

Bombas

Sistemas de proporción de espuma alrededor de la bomba

Sistema de agua y de espuma

10.5.6 Lucha contra la contaminación

El buque llevará un servicio de Oil Recovery de limpieza de derrame de hidrocarburos al mar.

Constará de sistemas de barreras flotantes que concentren el vertido en una zona para luego proceder a su recogida.

ANEXO 1: FICHAS DE LOS BUQUES DE REFERENCIA

STANFORD BATELEUR

DPS2 , FiFi 1, Diesel Electric Platform Supply

PRINCIPAL PARTICULARS:

Design : MMC 887
Builder : Fujian Mawei Shipyard, China
Class : ABS +A1, (E) offshore Support Vessel
WILD, AMS + DPS-2 + FFV Class 1

Flag : St.Vincent & Grenadines
Year : 2013
Call Sign : J8B4809
IMO # : 9654177
GRT/NRT : 3601/1429

DIMENSIONS:

Length Overall : 87.07 M
Beam : 18.80 M
Length BP : 83.00 M
Draft : 6.05 M
FreeBoard : 1.359 M
Air Draft : 27.92 M
DWT : 5128 MT

PERFORMANCE:

Max Speed : 13.5 knots @ 85 % MCR
Service Speed : 12 knots
Type of Fuel : MGO
Fuel consumption : 19.1 mt @ 85% MCR

CAPACITIES:

Cargo Deck Area : 1000 m²
Deck cargo Capacity : 2480 T
Deck Strength : 5.0 T/m²
Deadweight : 5118 T
Fuel Oil : 942.42 m³
Fresh Water : 494.18 m³
Drill Water : 1832.23 m³
Potable Water : 670.09 m³
Mud /Methanol : 430 m³
Mud / Brine : 1984 m³
Dry Bulk : 400 m³
Oil-Based Mud : 2409.65 m³

PUMPS WITH DISCHARGE RATE:

Fuel Oil : 1 x 150 m³/hr @ 80m/head
Fresh Water : 1 x 150 m³/hr @ 80m/head
Mud / Brine : 4 x 150 m³/hr @ 20m/head
Methanol : 1 x 65 m³/hr @ 80m/head
Dry Bulk : 2 x 30 m³/hr @ 5.6 bar
Oil-Based Mud : 4 x 150m³/hr @ 20m head
Main Fire Pump : 65Cbm/h, 0.6MPA head Test
Emergency Fire Pump : 65Cbm/h, 0.6MPA head Test
Cement : 6bar x 20.5m³/min, 2 nos
Barite : 6bar x 20.5m³/min, 2 nos

MACHINERY SYSTEM:

Main Engines : 4 x 2547 BHP (Total 10188 BHP)
Cummins QSK60-D(M)
Bow Thruster : 1 x 1220 BHP tunnel Thrusters
1 x 1072 BHP Retractable AZI
Stern Thruster : 2 x 2000 KW Azipull Thrusters
Shore Power : 1 x 400A Shore Supply Receptabal
Emergency Generator : 1 x 150 Kw

DECK & AUX EQUIPMENT:

Anchors : 2 x 2140 kgs HHP
Chain : 48mm U2 grade Tot 495 M
Anchor / Mooring Windlass : 2 x 10t @ 0-09m min C/W warping heads
Tugger Winches : 2 x 10t @ 12m min
Capstans : 2 x 5t @ 15m min
1 x 10t/d Fresh water maker
2 x ships Air Compressor 22M3/ hr
Oily Bilge Water Separator
Deck Crane : 2 T @ 10 M

DYNAMIC POSITIONING SYSTEM:

DP – 2 (Kongsberg) : 3 x Wind Sensor, 3 x MRU,
1 x Radius System, 3 x Gyro Compass
Seachest provide for HIPAP (Optional)
Independent Cjoy

FIRE EXTINGUISHING SYSTEM:

Fi Fi Class 1 2 x 1600 Cu.m @ 125m Hd
Monitors Remote control 2 x 1200 Cu.M One with duel Foam /Water
Emergency Fire Pump 35 Cu.M @ 60m Hd
Fixed Co2 System Engine Room
Fixed Water Mist System Engine Room
4 x fireman outfits
2 x fire blankets for engine room and galley
Fire Fighting Monitor 2 x 1600^{m³/hr} @125m head

ACCOMMODATION:

Number of Person : 52 Persons
16 x One Man Cabins 16
10 x Two Men Cabins 20
4 x Four men cabins 16
1 x Dispensary with 1 bed
1 x office
Hospital : Sick Bay with 1 Bed
Sewage System : 52 POB
Fully Air Conditioned : YES
Fixed Gas Detection : Being Fitted in DXB

NAVIGATION/COMMUNICATION EQUIPMENT:

GMDSS: Area 3 1 x DGPS
1 x Autopilot 1 x Magnetic Compass
1 x Gyrocompass 1X VDR
1 x Anemometer 1XBWAS
1 x Weather Fax Receiver 1 x TV and Radio system
1 x Auto Telephone system 1XAIS
1 x Inmarsat C with GPS and LRIT 1 x Duplex VHF with DSC
1 x MF/HF-DSC Radio Telephone 1 x PA/Talkback System
2 x VHF-DSC Radio Telephone 1 x Echo Sounder ,Speed log
1 x SSB Transceiver 6 Channel DSC 4 x VHF Portable radios
1 x 96nm X-band Radar 20.1" display 1 x 96nm S band 20.1" display
1 x Sound Powered Telephone system 1 x VSAT
Local Area Network (LAN) connected 1 x ERIDIUM

LSA EQUIPMENT:

1 x Diesel Powered 6 Person MOB +Davit
Launch and Recovery Davit
8 x 20 man life rafts SOLAS approved each side
16 x Lifebuoys SOLAS approved
60 Lifejackets as per SOLAS requirement
1 x EPIRB SOLAS approved
1 x Line Throwing Apparatus
2 x Orange Smoke Signals
SOLAS approved line throwing appliance
1 x First Aid Kit
1 x Daylight signaling light
1 x Air horn

TECHNICAL SPECIFICATION

Bourbon Topaz

PSV Plattform Service Vessel

P 105

Revision: 15.02.2006

IMO no: 9325829

DNV id no: 25678

MMSI: 258552000

Call Sign: LMXS

MAIN DESCRIPTION

Type:	P 105
Classification:	DnV + 1A1, Supply Vessel, SF, E0, DYNPOS-AUTR, LFL*, CLEAN, COMF-V (3), DK(+), HL(+), OILREC, NAUT-OSV (LOC)
Yard:	Ulstein Verft AS
Yard built no:	267
Place built:	Ulsteinvik
Country built:	Norway
Delivered:	February 2005
Flag:	NOR
Port of registry:	Fosnavåg
Owner:	Bourbon Ships AS

MEASUREMENT

Lenght oa:	86,20 m
Lenght bpp:	75,40 m
Breath moulded:	19,00 m
Depth moulded:	8,00 m
Draught max:	6,65 m
Gross tonnage GT:	3745 GRT
Corresponding DWT:	4847 DWT
Net tonnage NT:	1146 NT
ISM-Responsible:	Bourbon Offshore Norway AS

CARGO CAPACITY

Deck cargo:	2840 T, VCG 1m ab. Main deck
Deck area:	960 m ²
Deck strength:	10,0 t/m ² aft of fr. 47, 5,0 t/m ² elsewhere and 12T axle load
Fuel (gasoil):	1375,8 m ³
Liquid Mud:	837,1 m ³
Brine:	634,8 m ³
Drillwater/Ballast:	580,2 m ³ / 1520,2 m ³
Base Oil:	355,3 m ³
Dry Bulk:	288,00 m ³ , 6 x 48m ³ vertical tanks
Fresh Water:	1009,6 m ³
Glycol (MEG,TEG):	202,60 m ³
Methanol:	163 m ³
Oil Recovery:	1095 m ³
Slop:	313,8 m ³

DISCHARGE RATES

Loading/Discharge station:	2 each side. 4"/5" Weco/TODO connection
Fuel discharge rate:	2 pumps a' 250m ³ /h and 9 bar, frequency controlled
Mud discharge rate:	4 pumps a' 100m ³ /h and 18 bar, frequency controlled
Brine discharge rate:	2 pumps a' 150m ³ /h and 18 bar, frequency controlled
Drillwater discharge rate:	2 pumps a' 250m ³ /h and 9 bar, frequency controlled
Dry Bulk discharge rate:	2 BHS compressors a' 30 m ³ /min each at 6 bar, 100
Base Oil discharge rate:	2 pumps a' 250m ³ /h and 9 bar, frequency controlled
Fresh Water discharge rate:	2 pumps a' 250m ³ /h and 9 bar, frequency controlled
Glycol discharge rate:	2 pumps a' 100m ³ /h and 9 bar, frequency controlled
Methanol discharge rate:	2 pumps a' 100m ³ /h and 9 bar, hydraulic motor
Slop discharge rate:	1 pumps a' 150m ³ /h and 18 bar, frequency controlled

MACHINERY / PROPULSION

Main Engine set 1:	2 x Caterpillar 3516 TA 1825 kW-1800RPM	Bow Thruster 1:	1 x Kamewa Ulstein TT 2200 DNP-CP, 241 rpm 883 kW
Main Engine set 2:	2 x Caterpillar 3516 TA 1825 kW-1800RPM	Compass Thruster Forward:	1 x Ulstein Aquamaster TCNS 73/50-180, 883kW
Propulsion Aft:	2 x Rolls & Royce Azipull Thrusters, AZP 120, 2500 kW	Main Generators set 1:	2 x Siemens 1FJ3564-4, 2028kVA/440V/60Hz
Total BHP:	9789 BHP	Main Generators set 2:	2 x Siemens 1FJ3564-4, 2028kVA/440V/60Hz
Total Kw:	7300 kW	Emergency Generator:	1 x Caterpillar C9, 200kW, 3x440V, 60Hz
Garbage handling facility:	Incinerator plant	Shore Connection:	50m 3x440V, 350A

PERFORMANCE / CONSUMPTION

Max Speed/Consumption:	15,5 knots, 1388 l/h - 4 engines
Service Speed/Consumption:	13 knots, 800 l/h - 2 engines
Economical Speed/Consumption:	12 knots, 700 l/h - 2 engines
Standby Mode:	290 l/t
Port Consumption:	1,0 m ³

ACCOMODATION

Cabins/Beds:	13 x 1M, 6 x 2M
Crew/Passengers:	Accomodations for 25 persons
Mess/Dayroom:	1 x messroom, 2 x dayroom, 1 x deck pantry
Cool store/Freezer:	4,5 m ² / 4,5 m ²
Dry Provision:	12 m ²

DECK EQUIPMENT

Tugger winch:	1 x Hydrakraft 15T, 1 x Hydrakraft 20T, Reduced to 2 x 10T
Crane 1:	1 x Pallfinger Marine, PK 120000 MA
Capacity 1:	10T SKL, 8,0m (maks range 17m w/reduce load)
Crane 2:	1 x TTS Marine AS, GPK 260-10-10
Capacity 2:	10t / 10m
Anchors conventional:	Spek anchors 2 x 3060kg
Chain cables conventional:	495m (total length), stud link ø44mm NV K3
Windlass:	1 x Rauma Brattvåg, LBFMG6-304-4-C
Capstans:	2 x 10T Hydrakraft, 200252

RESCUE EQUIPMENT

Rescue class:	Prepared for FI-FI II	Radar transponders:	2 x Jotron Tron Sart
Hospital:	16 m ² incl. Toilet	Emergency Beacon:	1 x Jotron 40S,FB-4
Fire Fighting equipment:	Co ² /Water mist in eng. rooms	GMDSS VHF's:	3 x Jotron Tron TR20
MOB Boats:	1 x Mare Safety GRP 700	Survival Suits:	25 x survival suits, 4 x working suits
Heave compensated davits:	1 x Servi Technics HRT 3200	Life Jackets:	29 x SeaMaster adult
Rescue Regulation:	NMD	Life rafts:	4 x Viking 25DK

NAVIGATION AND COMMUNICATION EQUIPMENT

Radar 3 cm:	1 x Furuno FAR-2827 X-band, Arpa/AIS/Interswitch	GMDSS Sea Area:	A3
Radar 10 cm:	1 x Furuno FCR-2837S S-band, Arpa/AIS/Interswitch	MF/HF Radio:	1 x Skanti TRP 1250
Radar slave:	1 x 17" monitor aft. w/control	DSC Receiver:	Interfaced in TRP 1250
Gyro:	3 x Anschutz std 22 gyrocompass	VHF 1:	1 x SKANTI VHF 1000 DSC
Compass:	1 x Plath Reflecta	VHF 2:	1 x SKANTI VHF 1000 DSC
Autopilot:	1 x Anschutz Pilotstar D	VHF 3:	1 x SKANTI VHF 1000 P
Chart Plotter:	2 x Furuno TECDIS / CONNING	VHF 4:	1 x SKANTI VHF 1000 P
Navtex:	1 x SRH NAV-5	UHF:	3 x Motorola GM-360
Joystick:	1 x Kongsberg Simrad	Portable VHF:	N/A
AIS:	1 x Furuno FA-100 interfaced to electronic charts	Portable UHF:	3 x Motorola GP 900
VDR:	1 x Furuno voyage data recorder VR-5010	Mobile Telephone 1:	1 x NOKIA 22, interfaced to PABX
SSAS:	N/A	Mobile Telephone 2:	1 x NOKIA 22, interfaced to PABX
Echo Sounder:	1 x Furuno FE-700	Mobile Telephone 3:	1 x NOKIA 30, interfaced to Raydex
Speed log:	1 x Furuno DS-80 doppler log	Iridium:	N/A
Satellite Navigator (GPS):	1 x Furuno GP-90, 12 channel	Sat C 1:	1 x Thrane & Thrane TT-3020C
DP:	1 x Dynpos AUTR,Kongsberg SDP21	Sat C 2:	1 x Thrane & Thrane TT-3020C
DP Reference 1:	1 x DPS 700 (consists of DPS132/DPS200)	Fleet 77:	1 x Thrane & Thrane TT-3038C
DP Reference 2:	Inmarsat / IALA	Vsat Data/Phone link:	128kb up/down-stream, 2 x voice
DP Reference 3:	1 x Fanbeam Mk4	Intercom System:	UlsteinCom Data/Phone/TV
DP Reference 4:	1 x MRU 2 / 1 x MRU 5		
Wind Sensors:	2 x Gill WindObserver II Anemometer		

DP-2 PLATFORM SUPPLY VESSEL

M/V Breeze GPA 675-J

Main Characteristics

Length Overall	252	FT	(76.80 m)
Length Between Perpendicular	246	FT	(75.00 m)
Beam	60	FT	(18.28 m)
Depth	25.3	FT	(7.70 m)
Operating Draft	20.5	FT	(6.25 m)
Light Draft	12.0	FT	(3.66 m)
Tonnage ITC	<6,000	GT	

Capacities

Deadweight at Loadline Draft	4,357 LT	(4,426 mt)
Deadweight at Operating Draft	4,046 LT	(4,110 mt)
Cargo Deck Area	7,796 Ft ²	(724 m ²)
Cargo Deck Dimensions	157.5 x 49.5 Ft	(48.0 x 15.08 m)
Cargo Deck Loading	1024 lb/Ft ²	(5.0 mt/m ²)
Deck Cargo	1,476 LT	(1,500 mt)
Fuel Oil Cargo	153,577 USG	(636.6 m ³)
Fuel Oil Day Tank	14,528 USG	(55.0 m ³)
Bulk Mud	10,200 Ft ²	(288.8 m ³)
Liquid Mud	10,752 BBLs	(1,720.6 m ³)
Methanol	2,130 BBLs	(340.8 m ³)
Cargo Fresh Water	119,184 USG	(451.2 m ³)
Rig Water	468,826 USG	(1774.7 m ³)
Ship's Fresh Water	47,207 USG	(178.7 m ³)

Dynamic Positioning System (Class II)

ABS classed DP2 Redundant Positioning System Comprising:

Rolls-Royce Icon DP System classed ABS DPS-2	1 CyScan
2 Main Operator Stations	1 Mini RadaScan
2 Vertical Reference Unit	1 DP Alarm and Event Printer
3 Wind Sensor System	2 UPS with Minimum 30 Minute Power Output
1 Veripos LID2-GG1 Reference System	1 Independent Joystick Control
1 Veripos LID2-G2 Reference System	

Propulsion - Machinery

Total Installed Power	6,020 kW (8,070 hp)
Main Diesel Generators	2 X 2100 kW (2,815 hp) Caterpillar 3516C
	2 X 910 kW (1,220 hp) Caterpillar C32
Emergency Generator	1 X 203 kW (272 hp) Caterpillar C9
Main Propulsion	2 x 1,950 kW (2,613 hp) Rolls-Royce Azipull
	AZP 100, 360° Azimuthing
Bow Tunnel Thrusters	2 x 933kW (1,250 hp) Rolls-Royce
	2000 DPN Fixed pitch variable speed tunnel

Performance

Full Speed	12.7 knots
Economic	10.2 knots

Cargo Discharge

Fuel Oil	660 GPM at 250 ft TDH (150 m ³ / h at 76 m TDH)
Cargo Fresh Water	860 GPM at 250 ft TDH (195 m ³ / h at 76 m TDH)
Drill Water	860 GPM at 250 ft TDH (195 m ³ / h at 76 m TDH)
Liquid Mud (LM) Pump 1	1,000 GPM at 250 ft TDH (227 m ³ / h at 76 m TDH)
Liquid Mud (LM) Pump 2	660 GPM at 200 ft TDH (150 m ³ / h at 60 m TDH)
Methanol	440 GPM at 250 ft TDH (100 m ³ / h at 76 m TDH)
Bulk Material (BM)	74 LT/h at 250 ft (75 mt / h at 60 m)
LM System	Two cargo segregations with four tanks in each segregation. Each cargo segregation has one 1,000 GPM pump and one 660GPM pump. Mud agitation is provided by two Flygt mixers in each tank.

BM System	Two cargo segregations with two tanks in each segregation. The operating pressure of each segregation is 80 PSI. The system has two bulk mud compressors each rated at 735 SCFM at 120 PSI
-----------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Deck Equipment

Rescue Boat	1 x MOB boat with davit SOLAS cargo ship safety equipment
Tugger Winch	1 x 12 st (11 mt) pull
Deck Cargo Crane (optional)	3,000 Kg @ 9 m
Anchor Windlass	Fixed Boom / Electro-hydraulic
Off Ship Fire Fighting	1 ABS FIFI-1 2 x Monitors @ 5,280 gpm

Control & Safety

- Fully integrated DP / control dual redundant system.
- Alarm, monitoring and control system unattended machinery space.
- Remote control and monitoring of liquid mud and bulk mud cargo systems.
- USCG and SOLAS approved Water Mist total flooding and local application fire-extinguishing system.

Electronics

- 1 - X Band Radar with ARPA
- 1 - S Band Radar with ARPA
- 1 - Navigation Gyro Compass
- 1 - Autopilot
- 1 - Depth Sounder
- 1 - Speed Log
- 1 - Radio System Compliant with GMDSS A3 Rules
- 1 - EPIRB (2 radar transponders)
- 4 - VHF (bridge to bridge)
- 5 - UHF (Onboard communication)
- 1 - Weather Fax
- 1 - Navtex
- 1 - PA / Loud Hailer

Accommodations

Fully Air-conditioned
Accommodations for 34 people composed of:
14 x 2 man cabins
6 x 1 man cabins
Galley, Provision Room, Stores, Mess,
Walk in Refrigerator 423 Ft³ (11.9 m³)
Walk in Freezer 335 Ft³ (9.5 m³)

Registration

Type	Offshore Supply Vessel (OSV)
Owner	Jackson Offshore Holdings, LLC
Operator	Jackson Offshore Operators, LLC
Builder	BAE Systems Southeast Jacksonville, Florida
Flag	U.S.A.
Classification	ABS#A1 Offshore Support Vessel, #AMS, #FIFI-1, #DPS-2, ACCU, "circle E", SOLAS, USCG Subchapter I and L, Full Ocean

DAMEN PLATFORM SUPPLY VESSEL 5000 CD

GENERAL

BASIC FUNCTIONS CLASSIFICATION

Offshore supply
 ⚓1A1, SF, EO, Offshore Service Vessel,
 Supply – DYNPOS AUTR, DK(+), HL(2.8),
 COMF V(3), C(3), CLEAN DESIGN,
 NAUT-OSV(A), OILREC, RECYCLABLE

DIMENSIONS

LENGTH O.A.	90.00 m
BEAM MLD.	19.00 m
DEPTH MLD.	8.00 m
DRAUGHT SUMMER	6.30 m
DEADWEIGHT (SUMMER)	5000 t
DECK AREA	1020 m ²
DECK LOAD (VCG AT 1 M ABOVE DECK)	2800 t

TANK CAPACITIES

BALLAST / DRILL WATER	2000 m ³
FUEL OIL (SERVICE)	600 m ³
POTABLE WATER	1060 m ³
LIQUID MUD	1250 m ³
RECOVERED OIL (OPTION)	1500 m ³
FUEL OIL CARGO	1200 m ³
DRY BULK	380 m ³

PERFORMANCES (APPROX.)

SPEED (AT 5.00 M DRAUGHT)	14 kn
---------------------------	-------

PROPULSION SYSTEM

MAIN ENGINES	Diesel-electric, 690 V, 60 Hz
PROPULSION POWER	2x Electric motors of 2200 kW each
AZIMUTING THRUSTERS	2x Twin-propeller thrusters; each 2 x FP propeller, 2650mm diameter
BOW THRUSTERS	2x 880 kW, 1800 mm, FP

AUXILIARY EQUIPMENT

NETWORKS	690 V, 440 V and 230 V – 60 Hz
MAIN GENERATOR SETS	4x 1800 ekW at 900 rpm
EMERG./HARBOUR GEN. SET	1x 238 ekW at 1800 rpm
SHORE SUPPLY	1x 400A
HEATING SYSTEM	Waste heat recovery system

DECK LAY-OUT

ANCHOR MOORING WINCH	1x Electric-hydraulic, with rope drum and two warping heads
CAPSTANS	2x Electric, each 5 t pull
DECK CRANE	1x Knuckle boom 2.3 t at 11 m (harbour)
TUGGER WINCH	2x Electric-hydraulic, 10 t pull

CARGO HANDLING SYSTEM

BALLAST / DRILL WATER PUMP	2x 200 m ³ /hr
LIQUID MUD PUMP	2x 100 m ³ /hr
FUEL OIL PUMP	2x 200 m ³ /hr
FRESH WATER PUMP	2x 200 m ³ /hr
DRY BULK SYSTEM	2x 75 ton/hr
LIQUID MUD SYSTEMS	Agitators, circulation system, hot-water tank cleaning system

ACCOMMODATION

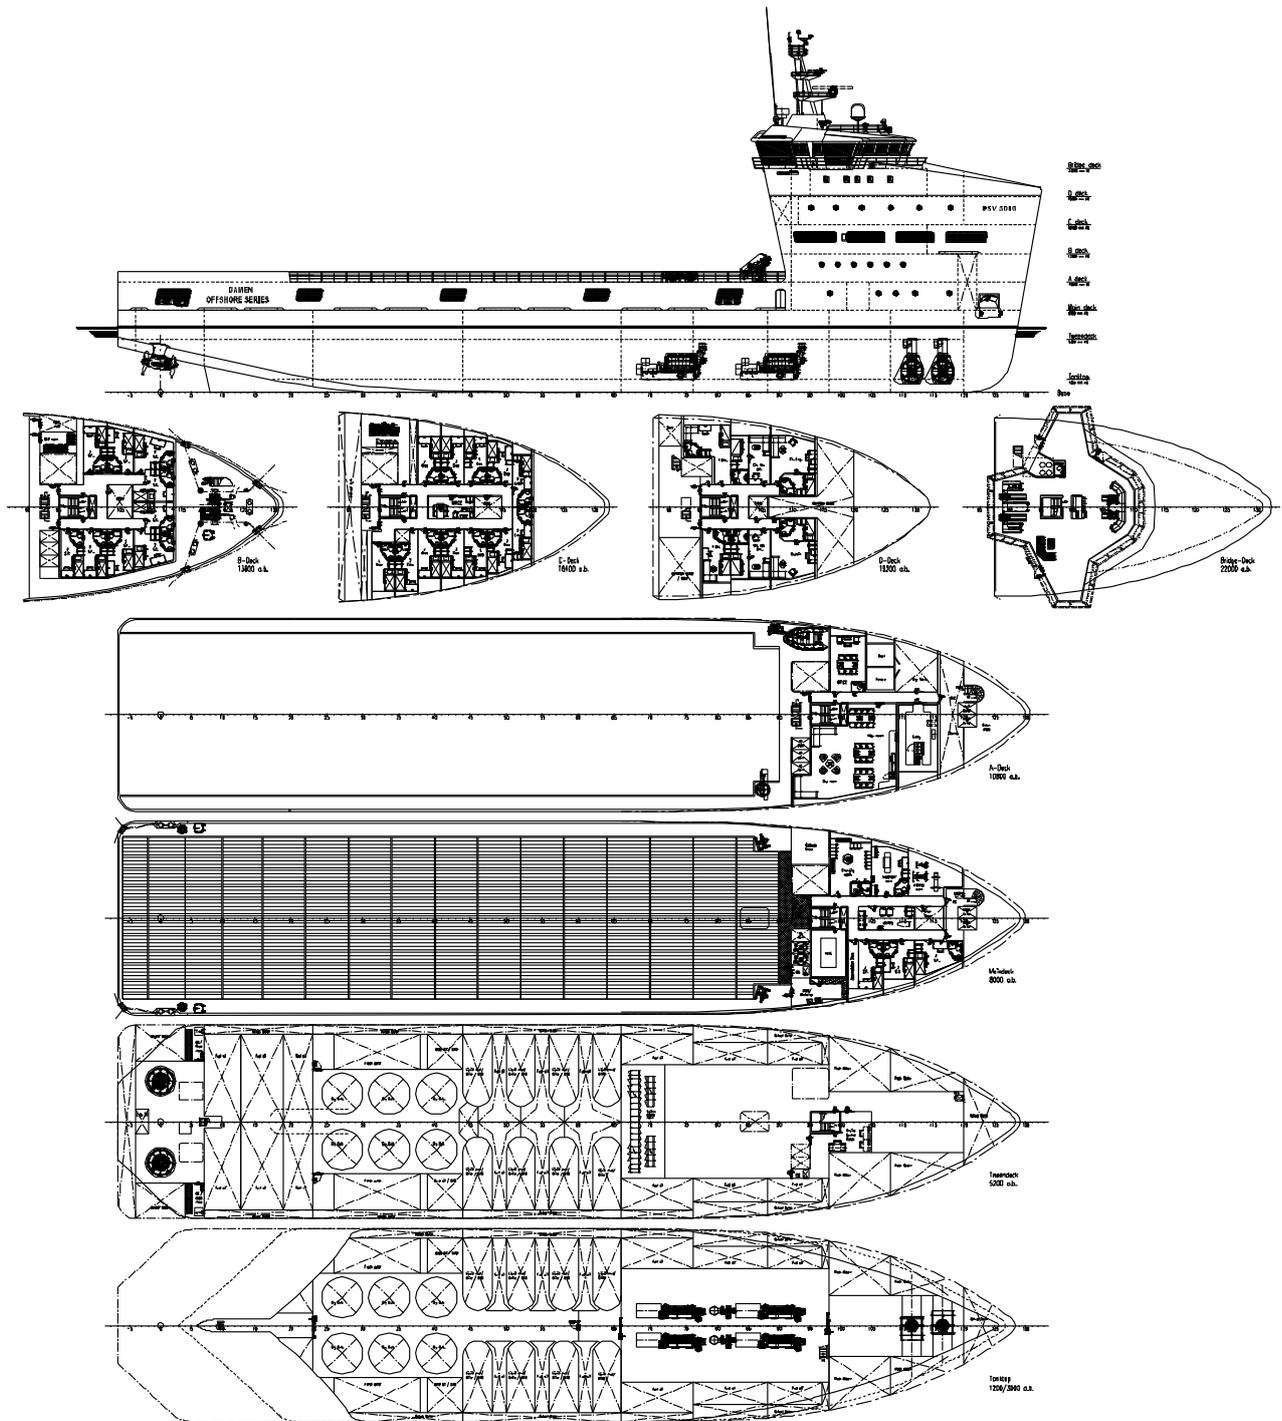

CREW	16 persons
SPECIAL PERSONNEL	28 persons
Cabins provided with Internet, telephone and satellite tv	

NAUTICAL AND COMMUNICATION EQUIPMENT

NAUTICAL	Radar X-band + S-band, ECDIS, Conning
DP- SYSTEM	DP-2
GMDSS	Area A3

OPTIONS

3rd tunnel thruster or retractable thruster
 Capacity for Low-flash point liquids
 Fire-fighting Ship 1
 Exhaust gas cleaning system (SCR)

IEVOLI SAPHIRE

PSV IEVOLI SAPHIRE - MMC 879 CP

THE VESSEL IS EQUIPPED AND FITTED FOR THE FOLLOWING CONTINGENCY SERVICES:

- FIRE FIGHTING
- MOB OPERATIONS
- SUPPLY DUTIES
- RESEARCH SHIP
- UNDERWATER ACTIVITIES

MAIN DESCRIPTION

Year Built : Delivery October 2013
 Vessel built : Selah Shipyard – Tuzla (Turkey)
 Type : Standby Platform Supply Vessel / FiFi 1 / DP2
 Classification : **ABS** - A1 (E) Offshore Support Vessel,
 AMS, ACCU, DPS-2, FFV Class 1,
 ENVIRO, UWILD, GP, OIL RECOVERY
 CAPABILITY Class 2
 Additional Notes : SPS Code – Resolution MSC.266(84)
 Port of registry : TBA
 Flag : Italian
 Call Sign : TBA
 IMO Nr. : 9658111
 Regulations : ABS, COLREG, Load Line, SOLAS Certificates,
 Tonnage Certificate, Marpol Annex I,II,IV,V,
 VI, IMO A493-494, IMO A749 (18), IMO 673
 (16), IMO A325, ISPS Code, MSC 645, MSC
 664, MSC 235 (82)

MAIN PARTICULARS

Design : MMC 879 CP
 LOA : 79,45 m
 Length PP : 76,10 m
 Breath Moulded : 16,80 m
 Depth Moulded : 7,40 m
 Summer Draft : 6,00 m
 Gross tonnage : TBC
 Net tonnage : TBC

PERFORMANCE

Trial Speed : 14,00 Knots
 At 100% : 920 Kg/h (approx)
 At 85% : 765 Kg/h (approx)
 At Economical Speed : 350 Kg/h (approx)
 Port consumption : 1 m³/day (approx)
 Type of Fuel : M.G.O.

CAPACITIES

Dead weight : 4000 t (approx)
 Gross Tonnage : TBC
 Net Tonnage : TBC
 Deck cargo : 1400 Tonn
 Cargo deck dimensions : 58,60 x 14,00 m
 Deck area : 820 m²
 Deck strength : 05 t/ m²
 Freezer Room : Available
 Cooler Room : Available
 Tank washing : Available
 Agitator LM Tanks System : Available
 Sewage Treatment Unit : Available

DECK EQUIPMENT

Capstans : 2 x 10 t
 Tugger Winches : 2 x 10 t
 Deck Crane : 2 t @ 10mt
 Fast Rescue Craft : TBA

CARGO CAPACITIES - Preliminary

Water Ballast / Drill Water : 1380 m³
 Cargo Fresh water / Potable Water : 910 m³
 Fuel Oil : 952 m³ / Max 1483 m³
 Liquid Mud : 1062 m³
 Brine : 531 m³
 Dry Bulk : 231 m³
 Recovered Oil : 265 m³
 Methanol : 202 m³
 Base Oil : 531 m³
 Inert Gas System : Fitted
 Cargo and Ballast Monitoring System : IAS - Fitted

CARGO PUMPS - Preliminary

Drill water : 200 m³/h at 9 Bar
 Potable water : 200 m³/h at 9 Bar
 Fuel oil : 200 m³/h at 9 Bar
 Base Oil : 200 m³/h at 9 Bar
 Liquid mud / Brine : 2 x 75 m³/h at 14 Bar
 Methanol : 75 m³/h at 9 Bar

DRY CARGO CAPACITIES - Preliminary

4 pressure tanks for bulk : 552 t
 cement/barite : 231 m³
 Compressor capacity : 1278 m³/h
 Work pressure : 6,0 bar
 Discharging capacity : 2 x 100 t/h at 90 m head
 Pipe and manifold : 2 x 5" Weco

PIPE LINE CONNECTIONS

Dry Bulk : 5" Hammer Lug Union (Weco) Male
 Liquid Mud : 5" Avery Hardoll Male
 Fuel oil : 5" Avery Hardoll Male
 Potable Water : 4" Hammer Lug Union (Weco) Male
 Ballast Drill Water : 4" Hammer Lug Union (Weco) Male
 Methanol : 4" Avery Hardoll Male
 Reducers Connections : 4" and 5" for each connection type

ENGINE AND PROPULSION

Main engines Power : 2 x 2500 Kw / 2 x 3440 Bhp
 Gear : 2 Main Gear
 Propellers : Dia. 3000mm
 Variable pitch in fixed nozzels
 Tunnel thruster : - 2 Tunnel Bow Thruster
 2 x 800 Kw / 1070 Bhp
 - 2 Tunnel Stern Thruster
 2 x 600 Kw / 800 Bhp
 Steering gear : 2 x High lift profile rudder blades
 2 x Electro independent hydraulic system
 2 x Hydraulic Power Pack

AUXILIARY ENGINES

Shaft Generators : 2 x 1400 Kw
 Diesel Generators : 3 x 585 Kw
 Emergency generator : 1 x 200 Kw

DP SYSTEM

DP Class : II
 DP Type : Kongsberg
 Gyro Compass : 3 Navigat X Mk1
 Position Reference Units : 2 x DGPS + 3 Wind Sensor
 Laser Reference : 1 x Cyscan Mk4
 Acoustic Reference : HiPap Trunk fitted
 Hypap 500 Predisposition
 Motion Reference : 2 x MRU
 ERN : TBA

MANOEUVRING

Joystick : Fully Integrated, serviceable from various
 wheelhouse positions + 1 portable

NAVIGATION EQUIPMENT

1 x Radar, JRC JMA-5300 ARPA X-band
 1 x Radar, JRC JMA-5300 ARPA S-band
 2 x high resolution color display, radar plotter 19"
 1 x Radar repeater (slave radar) at aft wheelhouse console
 1 x DGPS JRC JLR 7800
 1 x Navtex JRC
 1 x Echo Sounder JRC
 1 x Speed Log
 1 x AIS JRC A-Class
 1 x Gyro Compasses Yokokawa
 1 x Magnetic Compass Plath
 1 x Autopilot Kongsberg
 1 x Doppler Log - Off Course Alarm
 1 x BNWAS/1 Navitron
 1 x Voyage Data recorder

CCTV coverage for all key areas with display at Wheelhouse and ECR

COMMUNICATION EQUIPMENT

GMDSS Station Area A1+A2+A3
 - 1 MF/HF JRC DSC + ATIS
 - 2 VHF DSC JRC
 - 3 Emergency VHF Jotron Tron
 - 2 Inmarsat C JRC JUE-85
 - 1 Inmarsat C SSAS Sailor
 - 1 Radio telex
 - 1 EPIRB Jotron Tron
 - 2 SART Jotron Tron
 - 1 Fleet Broadband 500 data/fax/mail transfer
 - 1 Public Address System

ACCOMMODATION

Type of cabins	No. of cabins	No. Of berths
1 man cabins	6	6
2 man cabins	12	24
Hospital / Dispensary	1	2
Total number of bunks	18 + 1	30 + 2
Recreation Rooms	: Gym, Day room Lounge, Smoking Room	
Ship's Office	: Fitted	
Sky Lobby	: Fitted	

FIRE FIGHTING

Fifi, class I

The fire fighting system consists of the following main components:

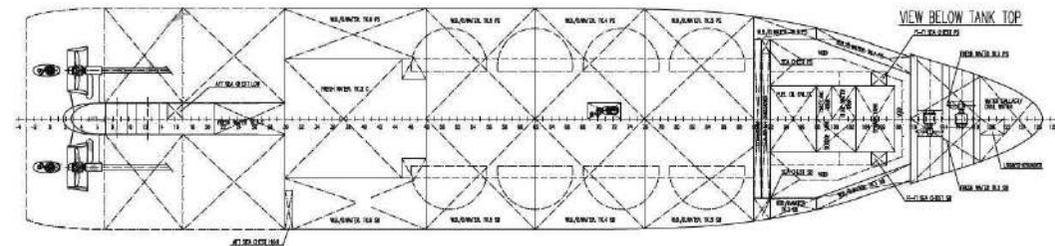

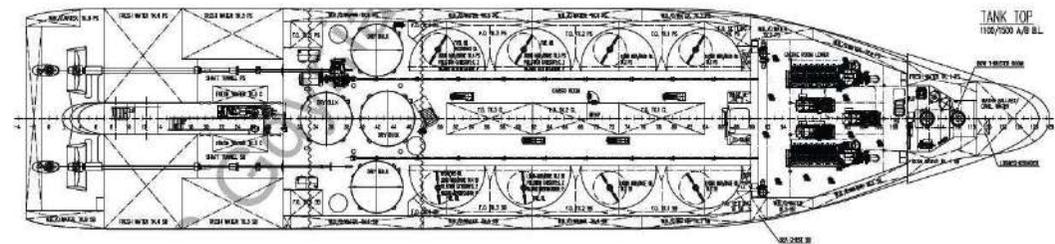

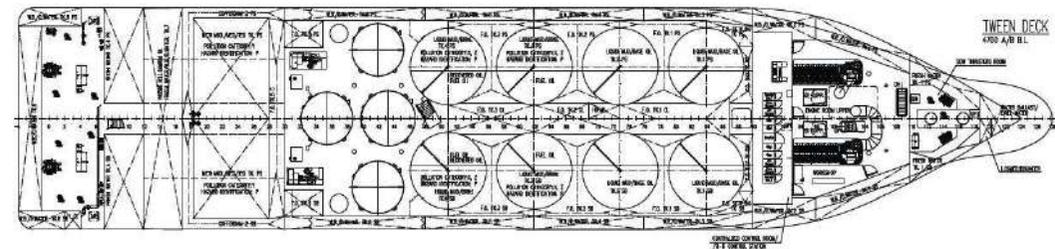

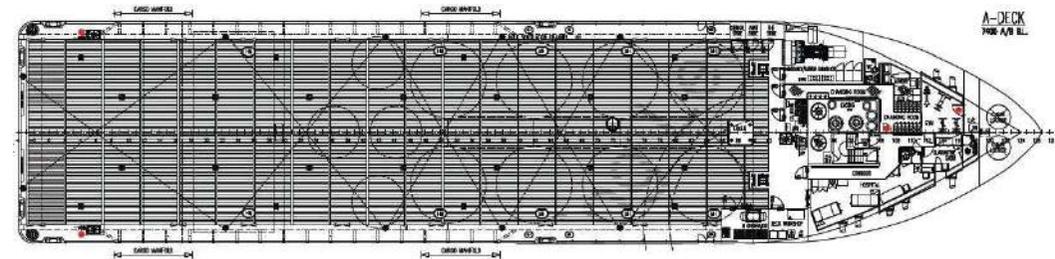

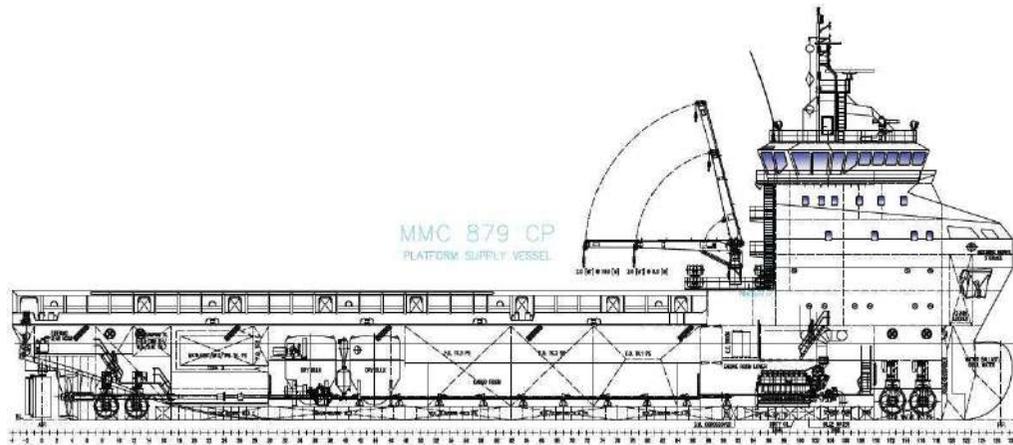

- 2 off fire-fighting centrifugal pumps FFS SPF250x350HD
 capacity: 1742 m³/h head: 11,8 mlc 1800 rpm / 790 Kw
- 2 single/dual flow monitors FFS 1200/300LB
 joystick controlled from bridge
 capacity: 1200 m³/h - 10,0 bar
 throw length – capacity full : 120 m
 throw length – capacity reduced : 75 m
- 1 foam pump DPVFS 18-100
 18 m³/h - 18,5 Kw head: 185 mlc 3420 rpm
- 2 fog monitors for own protection type ABS
 Water spray system with standard tug nozzles
 1061 m³/h at 7,8 bar

RESCUE AND LIFESAVING EQUIPMENT

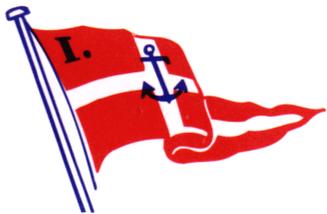

- 1 x Fast Rescue Boat
- 4 x Liferrafts
- 2 x Search Light remotely controlled from bridge
- 6 x Lifebuoys provided with strobe lights and lifelines
- 1 x Hospital with treatment bench, racks for stretchers,
 Desk, medicine, poison locker
- 1x Dispensary with medical equipments / medicine in accordance
 with Flag's State and International requirements

NAVIGATION EQUIPMENT

1 x Radar 10 cm Arpa 40 target
1 x Radar 3 cm Arpa 40 target
1 x GPS with 12 channel receiver
2 x DGPS with interface to all rel. navigations
3 x Gyro compasses with digital repeaters
1 x Magnet compass
1 x Doppler log
1 x Echo sounder
1 x Electronic chart system interface to all relevant navigation systems and with AIS interface

COMMUNICATION SYSTEMS

The radio installation is according to GMDSS-A3 (World Wide)

1 x HF / MF Duplex radiostation 500 W
1 x HF / MF DSC
2 x Duplex VHF W/DSC
5 x Simplex VHF
1 x Navtex Receiver
2 x inmarsat C with EGC receiver
1 x Inmarsat "Mini M"
1 x inmarsat B
1 x Fax provided for inmarsat B
1 x Weather facsimile
1 x VHF Directions finder
3 x Portable VHF GMDSS
4 x Fixed UHF with 200 channels
1 x free float bacon
2 x radar transponders
3 x portable VHF
6 x portable UHF, EEX Proof W EX – Battery
4 x wireless telephones interfaced to cell phones
4 x GSM mobilephone Voice/Fax/Data

DECK MACHINERY

Tugger winch: 2 x 16 tons
Cargo winch: 8 x 5 tons
Deck Crane: 2 x 10t/10m
Capstans: 2 x 10 tons

SPEED AND CONSUMPTION

Service speed: 13,5 knots - approx. 40m³ LNG/24hrs or 17m³ Diesel/24hrs
Eco Speed: 11 knots - approx. 27m³ LNG/24hrs or 12m³ Diesel/24hrs
DP operation: approx. 13m³ LNG/24hrs or 7m³ Diesel/24hrs
Stand by: approx. 10m³ LNG/24hrs or 4,3m³ Diesel/24hrs

ACCOMMODATION

Total 24 –Persons
12 x Single Cabins for officers and crew
6 x Double Cabins for passengers
1 x Mess
2 x Dayrooms
1 x Gym
1 x Deck office
1 x hospital
Safety equipment acc. to Solas for 24 persons

RESCUE AND LIFE SAVING EQUIPMENT

1x FRC type Norsafe Mako 655 212HP

Hospital with treatment bench, stretchers, medicine and poison lockers, intercom and direct ship to shore communication. Medical equipment/medicine in accordance to NMD

ENGINES AND PROPULSION

Main Engines and Generators:

4 x Wartsila 6R 32 DF 2010 kW, 690V - 60Hz
4 x ABB AMG 630 S 10 – 2438 kVA 1950 ekW, 690V / 60 Hz

Generator

1 x Cat 3304 Rating: 116 BKW Voltage: 3 x 440 V 60Hz

Azimuth thrusters aft:

2 x Rolls Royce Contaz 25 Azimut 3300kW

Azimuth thrusters forward:

1 x Rolls Royce 880 kW Azimuth

Tunnell thrusters:

2 x Rolls Royce(Kamewa) Bow Thruster 1000 kW

VS 4403 PSV
PLATFORM SUPPLY VESSEL

Lewek Aquarius

PSV/ FIFI 1/ 8,716 BHP/ DP 2

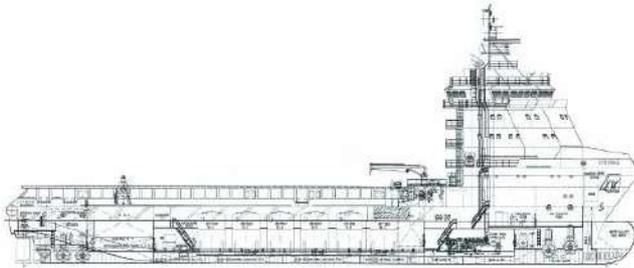

Lewek Aquarius is a Platform Supply Vessel built:

- 1) For Worldwide Operations to Service Drilling Units;
- 2) To Provide Logistics Support for Oil & Gas Production Platforms;
- 3) With Special Equipments for Fire-Fighting, Safety Standby Operations, Emergency Evacuations, ROV Duties, and Seismic Services.

Specifications:

- Length 87.90 m
- Breadth 18.80 m
- Propulsion 8,716 BHP
- Deck Area 945.0 m²
- Fuel Oil 965.0 m³
- Potable Water 663.0 m³
- Liquid Mud 2,077.0 m³
- Dry Bulk 310.0 m³
- Methanol 204.0 m³
- Crane 1 x 2 T @ 12 m
- Accommodation 60 men

Lewek Aquarius General Specifications

CLASSIFICATION

American Bureau of Shipping

✳ A1, (E), Offshore Support Vessel, ✳ AMS, ✳ Oil Recovery Class 2, ✳ ACCU, ✳ DPS-2, ✳ FFV Class 1, ENVIRO, UWILD, GP, TCM, ✳ Safety Standby Service GR B-(300)

Builder	Remontowa Shipbuilding S.A.
Year Built	2012

HAVILA CHARISMA

Platform Supply Vessel – PSV

HAVILA CHARISMA

Platform Supply Vessel - PSV

MEASUREMENTS

Length o.a.	92.80 m
Length b.p.p.	82.80 m
Breath moulded.	19.60 m
Depth moulded	8.00 m
Draught, Max.	6.569 m
Freeboard S, min	1.443 m
DWT	4 976 t
Gross tonnag	4 327 t
Net tonnage	1 578 t
Higt from keel	36.630 m

CLASSIFICATION

DNV : +tAI - SF - Eo - HL(2.8) - LFL* - DYNPOS AUTR - OFFSHORE SERVICE VESSEL+ - SUPPLY - CLEAN DESIGN - NAUT OSV(A) - COMF - V(3) - C(3) -DK(+)

CARGO CAPACITIES

Deck area max	L x B= 66 m x 16.4 m = 1082.4 m ²
Deck strength	Main deck from stern to fr. 102 = 10 t/m ²
Fuel Oil	711.3 m ³
Liquid Mud SG 2.8	1044.1 m ³ Total 8 tanks
1 Agitators in each tank (El. Driven)	
Brine SG 2.8	516.9 m ³
Base oil	308.9 m ³
(Can be used for fuel. separated with sout ventil)	
Pot water:	814 m ³
Drillwater / ballast	1958.1 m ³ / 1958.1 m ³
Methanol +	
Nitrogen bottle rack system + 1 Nitrogene Comp.	317.2 m ³
Special Product:	
Nitrogen bottle rack system + 1 Nitrogene Comp.	217.3 m ³
Slop:	50.4 m ³ + Use of mud tanks
Cement / Barite / Bentonite:	
3 seperate systems	6 Vertical tanks each 50.6 m ³ Tot. 303.7 m ³

DISCHARGE RATES

Fuel Oil	2 x spindle Screw 0-200 m ³ /h - 9 bar
Liquid Mud	2 x Ecc. Screw 0-100 m ³ /h - 24 bar
Brine	2 x Ecc. Screw 0-100 m ³ /h - 24 bar
Mineral oil	1 x spindle Screw 0-100 m ³ /h - 9 bar
Pot. water	2 x Spindle Screw 0-200 m ³ /h - 9 bar
Drillwater/ballast	2 x Spindle Screw 0-200 m ³ /h - 9 bar
Methanol	2 x Centrifugal hydr. Driven 0-75 m ³ /h - 9 bar
Special Product	4 x 2-Screw pump hydr. Driven "heavy duty" - 0- 75 m ³ /h - 9 bar sg 1.2
Slop	1 x Ecc. Screw 0-15 m ³ /h - 12 bar
Cement / Barite	2 x Screw Comp. 25 m ³ /min - 5.6 bar with 1 x external dryer on each comp. 2 x Cyclone 2 x Dust Collector

TANK CLEANING SYSTEM

A total of 15 cleaning machines fitted in: MUD, Brine and Slop tanks	
Slop Tank	1 x 50.4 m ³
Hot Water Tank	1 x 15.6 m ³

CARGO MANIFOLDS

Manifolds midships inside starboard and port cargo rail.

And inside aft starboard and port cargo rail.

Brine, Mud og Baseoil	Mann-Tek 4" NPT Viton WP - 25 bar
Fuel	Mann-Tek 4" NPT Alu/Viton - 16 bar
Fw, Dw	Anson 4" Female Sub
LFL	Mann-Tek 4" SS NPT Viton WP25Bar with Breakaway 52 KN

MACHINERY / D/E-PROPULSION Resiliently Mounted

Main Engines	4 x 2080 KW MTU 16V 4000 M33S
Main generators	4 x 2222 KVA. Type Marelli MJR 500 SC4 B20
Harbour Engine	1 x 695 KW MTU 12V 2000 M41B
Harbour Generator	1 x 667 KVA Type Mirelli MJBM 355 MB4 B35
Emergency Engine	1 x 265 KW Volvo Penta D9A2A MG
Emergency Generator	1 x 202 KVA Stamford UCM274HI

MAIN PROPULSION

Fixed pitch	2 x 2100 KW Steerprop SP25CRP
Electric drives	2 x Quadro Drive 2100 KW
Fwd. Tunnel thrusters type	2 x 1000 KW. FU74LRC2000
Brunnvoll (S Silent)	2 x Quadro Drive 1000 KW
Fwd. azimuth thruster type:	1 x 880 KW AR63LNC 1650
Brunnvoll Retractable	1 x Quadro Drive 800 KW
Azimuth	

PERFORMANCE / CONSUMPTION at draft 5.00 m

Max speed	15.3 knots / 24.1 m ³ / 24 hrs
Econ- speed	10 knots / 6.9 m ³ / 24 hrs
Service. speed	12.0 knots / 11.5 m ³ / 24 hrs
DP II Average	Draft 5.8 mtr / 5.6 m ³ / 24 hrs
Harbour Mode	1.6 m ³ / 24 hrs

BRIDGE DESIGN: NAUT - OSV HAVYARD CONCEPT BRIDGE

1 x Consol forward bridge
3 x Consol aft bridge, and two equal operator stations
1 x Consol each bridge wing
1 x Radio station. connected to forward bridge console
1 x Office / work station

IAS SYSTEM

Hayard Power system (HPS) Concept HMA HC800

AUTOMATION SYSTEM

Hayard Power system (HPS) Concept HMA HC800

LOADING COMPUTER

1 x Autoload from Coastal design

ACCOMODATION 27 PERSONS

Cabins	11 off single cabins 6 off 1M+1 cabins 2 off 2 x 2 men cabin 1 off office C-deck 1 off Hospital Main deck
--------	-----------------------------------------------------------------------------------------------------------------------

DP SYSTEM DYNPOS AUTR

Kongsberg K-Pos, cJoy and K-Master Dynamic Positioning System
DYNPOS-AUTR
2 x K-Master Work Stations with integrated independent Joystic (cJoy) in Chair
3 x K-Pos OS
2 x cJoy OT independent Joystic on bridge wings
1 x Seatex DPS 122 DGPS
1 x Seatex DPS 200 DGPS
1 x Radius with 2 interrogator Radius 1000
1x Transponder type Radius 700
1 x Cyscan
1 x Wind sensor: OMC 139
1 x Wind sensor: OMC 139D
3 x Seatex MRU type MRU-M-MB1
1 x Kongsberg History station

THRUSTER CONTROL

Kongsberg K-Thrust

BRIDGE WATCH MONITORING SYSTEM

Havyard Power system (HPS) BWAS

LIFE SAVING EQUIPMENT

Safety Equipment: Acc to NMD/SOLAS for 27 pers.
Life Raft: 6 x 16 persons. 3 on each side
Mob boat type: Mare Safety GTC 700-2VD 10 pers.
Mob boat davit type: TTS HL9D MOB3800
Survival suits: 27 persons + 5
Lifejackets: 32 + 2 childrens size
1 x Danscope Rescue basket
2 x Climbing net
1 x Diver's ladder aluminium 5 mtrs.
4 x Boathooks w/4 mtrs GRP shaft
Rescue/St-By for 250pers Acc to NMD

INCINERATOR

1 x Teamtec OG-200-CS

DECK EQUIPMENT

Windless Electric driven 2x Adria Anker/Mooring Winch type:
AMW-ER-46/U3/45-CDDCG 100 KN
2x Adria Mooring Winch type: MC-E-100/12.2/24.5-DG 100 KN
Tugger winch Electric driven 2 x Adriawinch PWE 100 100 KN each.
Capstan Hydr driven 2 x Adriawinch 100KN
Deck Crane 1 x TTS GPK115-3-15
SWL 3T 2.1 – 15 m (Starboard)
1 x Palfinger PK 23500 m (Port)
SWL 1865 kg-10 m / 2140 kg – 6.1 m
Cargo securing winch 6 x AdriaWinch type:
PW-E-30/6-15/28-DG Pull 30 KN. 3 on each side in cargo rail
Karmøy Winch Hose securing Midship Starboard and Port
Unit. Remote controlled from AFT. Starboard and Port
bridge.
RRM ASFA 4-2 . Automated 8 pc Hydraulic winches. Pull 4tonn
Sea Fastening Arrangements.

ENTERTAINING EQUIPMENTS

1 x Sat. TV: Seatel
Triax TDX Tv system with 24 channels

1 x TV in all crew cabins
1 x TV in all lounges
1 x Radio / DVD in all cabins
1 x Gymnasium B - Deck w/Equipments

TERMINALS FOR REFRIGERATE CONTAINER

4 Terminals with 7 socket on each terminal. Placed on stb: fwd and mid ship, and port: aft and mid ship.
A total of 28 conections for Refrigerate containers

ANTI ROLLING SYSTEM

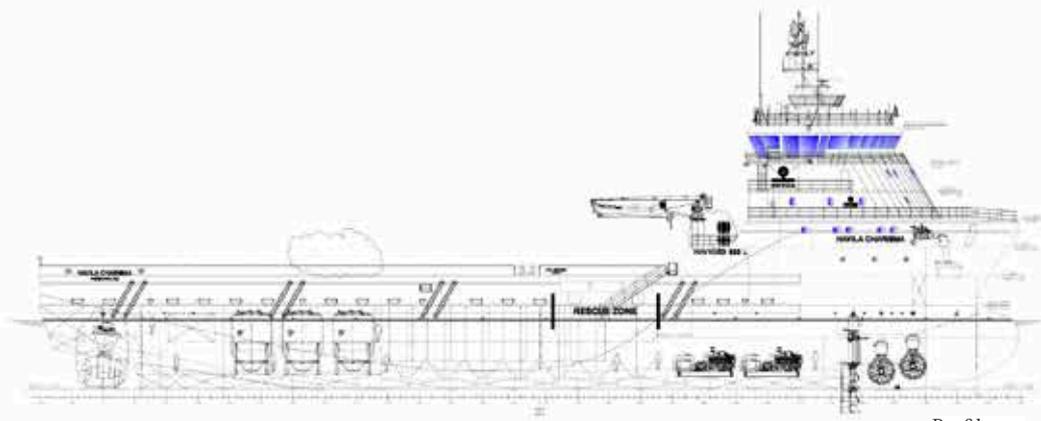

2 x Stabilizing tanks. Passive roll reduction system.
One on aft peak and one aft on D-deck

COMMUNICATION EQUIPMENT GMDSS A 3

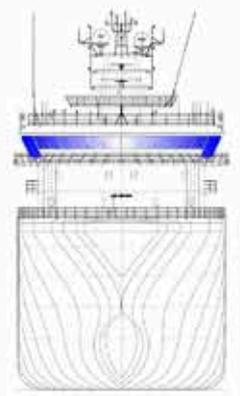

1 x Sailor 6000 SSB Simplex Radio station
2 x Sailor 6000 Inmarsat-C w/EGC
1 x Sailor Fleet Broadband 250 Voice / Mail
2 x Sailor 6222 Semi duplex VHF With DS
3 x Sailor 6248 Simplex VHF
3 x Jotron GMDSS approved portable VHF, Model Tron TR-20
1 x Icom Portable VHF Air Band Transceiver IC-AGE
2 x Jotron Radar Transponder, Model TRON SART-20
1 x Jotron EPIRB Automatic, Modell TRON 40S
1 x Jotron EPIRB Manuel, Model TRON 45SXX
5 x Motorola GM-380 Fixed UHF.
6 x Motorola Portable UHF, EX approved, Model GP380 AteX
4 x Motorola Portable VHF, EX approved, Model GP340 AteX
10 x Headset to build inn safety helmets
1 x Marlink VSAT Antenna. Bandwidth 512
2 x GSM Phone: Voice
1 x Icenet : Internet/E-mail. Bandwidth 512
Integrated Communication System Zenitel Stentofone
7 x Dect C3105B Handset
7 x Indoor base stations + 1 lekagecable below MD
1 x Outdoor base station
PA Anlegg type Steenhans CBT-10
1 x Loudhailer system: Speaker 1 x 100 W, 1 x 30 W, 12 x 15 W
6 x Batteryless phones type: VSP-211-L, VSP-213-L, VSP-223-L

NAVIGATION EQUIPMENT

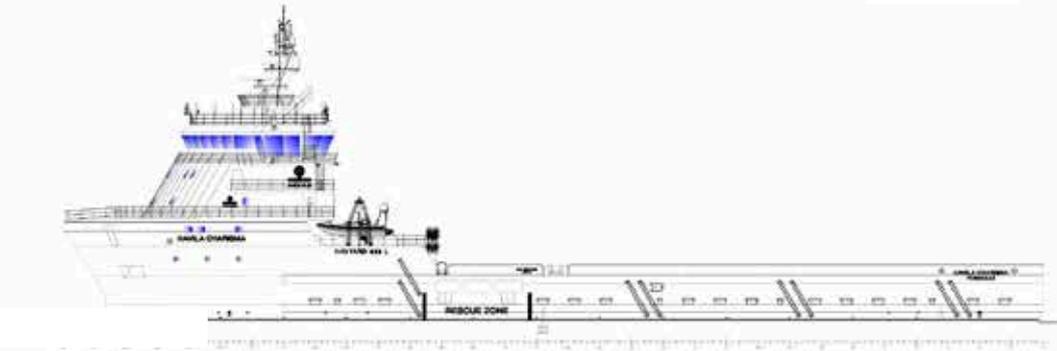

1 x Furuno S-Band ARPA Radar, Model FAR-2x27S BB
1 x Furuno X-Band ARPA Radar, Model FCR-2x17 BB
2 x Furuno ECDIS, Model TECDIS T-2138A
4 x Furuno Conning system, Model Furuno
2 x Furuno DGPS Navigator, Model GP-150
1 x Taiyo VHF Direction Finder, Model TD-L1550
1 x JRC NCR – 333 Navtex
3 x Anschutz Standar 22 Digital Gyrocompass
2 x Anschutz Gyro selector system
1 x Anschutz Analogue repeater forward
2 x Anschutz Digital repeater
2 x Anschutz Bearing repeater 3600
1 x Anschutz Adaptive Autopilot, Pilotstar D
1 x Furuno FE-700 Navigational Echo Sounder (IMO approved)
1 x Furuno Doppler speed log, Model DS-820
1 x Furuno FA 150 AIS transceiver
1 x Furuno Voyage Data Recorder, Model VR-3000
1 x Vingtor VSS Sound Reception System

BUILT BY: Kleven Verft AS
YEAR BUILT: 2014

JUANITA Salt 100 - Platform Support Vessel

Main Description

Type of Vessel	Platform Supply Vessel
Classification	DNV+1A1, ICE-C, SF, DYNPOS AUTR, EO, LFL*, OILREC (NOFO 2009), Clean Design, Naut OSV (A), COMF-V(3)C(3), NMD Stand-by Vessel, BIS, BWM-T, DK(+) and HL (2.8), TIMON, DEICE
ERN Number	99.99.99.99
NOFO	2009
Stand-By	NMD - 225 Survivors
Place of Build	Kleven Maritime AS, Norway
Year of Build	04/2014
Flag	NOR
Design Company	Salt 100 Ship Design Norway
Yard Number	361
IMO Number	9665011
Call Sign	LDLA
Shipowning Company	Ugland Supplier AS J.M. Uglands vei 20, N-4878 Grimstad, Norway

Measurements

Length Overall	88.90 m
Length Between	
Perpendiculars	81.10 m
Breath Moulded	20.00 m
Draft Mid. Main Deck	8.80 m
Draft Summer Marks	7.294 m
DW Summer Draft	5 456 T
Gross Tonnage	4 902 GRT
Net Tonnage	1 514 NRT
Displacement Summer	9 056 T

Machinery

Generator set:	
Engines	3 x 1665 kW, total 4995 kW Type Wärtsilä - 9L20
Engine	1 x 750 kW Type Wärtsilä - 4L20
Engine (Harbour)	1 x 750 kW Type Wärtsilä - 4L20
Generators	3 x 1784 KVA, 690 Volt, 60Hz, 900 rpm Type: AVK DSG 99 M1 - 8W
Generators	2 x 784 KVA 690 Volt 60Hz, 900 rpm Type AVK DSG 86 KO - 8W
Main Propulsion	2300 kW + 1700 kW Scana Volda CRP Type FP3400/FP3800/TH750/PM2054
Emergency Generator	1 x 270 KW, Engine Volvo Penta Type D9A2A MG 1 x 216 KW Generator Stamford Type HCM 434D1 690 Volt 60Hz

Thruster

Retractable Thruster	1 x 880 kW, Brunvoll AR63 LNC 1650
Bow Thrusters	2 x 1200 kW Brunvoll FU-80-LTC-2250-1200 Tunnel
Aft Thrusters	2 x 1400 kW Brunvoll FU-74-LTC-2000-1400 Tunnel

Vessel Speed and Consumption

Max Service Speed	14.9 knots	Approx	19.4 m ³
Economic Speed	11 knots	Approx.	7.2 m ³
DP Operation		Approx	5.5 m ³
Stand-By at Sea		Approx	2.6 m ³
In Port (idle, hotel load only)		Approx.	1.5 m ³

The above is based on max. draft 5.0 m/ 2000 Mt Dwt., max 1.5 m significant wave height, average value of head/tail winds and seas, light winds and no swell.
For DP and St.by. at sea, varying heading, max. Beaufort force 5 and max Hs 2 m.

Accommodation

Single Cabins	12
Double Cabins	6
Hospital	1
Total Accommodation	24 berths, all cabins fully Air-Conditioned
Laundry	1
Messroom	1
Dayroom	1
Galley	1
Cool Store	1
Freezers	1
Dry Provision	1
Offices	1
Gymnasium	1

Capacities

Deck Load Max	3 150 Mt	
Deck Strength	10 t/m ²	
Dry Bulk Capacities	394 m ³ in 6 tanks. 6 bar max	SG 2.32
Ballast/Drillwater	1 216 m ³ in 12 tanks	
Freshwater	681 m ³ in 6 tanks	
Freshwater	298 m ³ in 2 stainless steel tanks	
Liquid Mud, LFL*	1 080 m ³ in 8 tanks w/agitators and circulation by cargo pump	SG 2.8
Liquid Mud, LFL	289 m ³ in 2 tanks w/agitators and circulation by cargo pump	SG 2.8
Liquid Mud	118 m ³ in 2 tanks w/circulation by cargo pumps	SG 2.8
Brine (in liquid mud tanks)	984 m ³ in 8 tanks	SG 2.8
Base Oil/Fuel oil	183 m ³ in 2 tanks	
Fuel Oil	814 m ³ in 12 tanks	
Methanol/ Special Products	104 m ³ in 2 tanks	SG 1.4
Special Products/ ORO	146 m ³ in 2 tanks w/ heating coils	SG 1.4
Special Products	104 m ³ in 2 tanks	SG 1.4

ORO Mode Capacity: 1 738.6 m³

Aut. Tankwashing System in OBM/Brine/Spec. Product/Methanol tanks

N2 Generator	6000-C-210,
Capacity	188Nm3@95% N2
N2 Receiver/Storage	1000ltr/10bar
Connection for shore filling	

Covering:

All Liq Mud/LFL tanks (12) and incl dedicated Slop tank Special product and Methanol tanks

WB/N2 tanks surrounding LFL* tanks, Special product, Methanol tanks and cofferdam

Roll reduction tanks 126.4 + 327.9 m³

Discharge

Dry Bulk	2 x 0-30 m ³ /min at 6,5 bar
Ballast/Drill Water	2 x 150 m ³ /hr at 9 bar – Screw pump, Frequency control, PG NM 81200999
Fresh Water	2 x 150 m ³ /hr at 9 bar – Centrifugal pump, Frequency control, PG 80/250 A4
Liq,Mud/Brine/Slop	12 x 120 m ³ /hr at 9 bar - Hydraulic Submerged Pump. Framo Type SD150
Base Oil	2 x 100 m ³ /hr at 9 bar – Centrifugal pump, Frequency control, PG 65/250 A4
Fuel Oil	2 x 150 m ³ /hr at 9 bar – Centrifugal pump, Frequency control. PG 80/250 A4
Special Products	4 x 75 m ³ /hr at 9 bar – Hydraulic Submerged Pump. Framo Type SD100
Methanol	2 x 75 m ³ /hr at 9 bar – Hydraulic Submerged Pump. Framo Type SD100

Reducer fittings available

Bulk Cargo Stations

PS/SB Mid Ship	Dry Bulk, DW, FW, Mud, Brine, Base Oil, FO, Special Products, Methanol, Slop
PS Aft	Base Oil, FO, DW, FW, Dry Bulk
SB Aft	Mud, Brine, Special Products, Metanol, Slop

Deck Equipment

Deck Dimensions	60.0 x 16.8 m
Deck Area	1 016 m ²
Deck Area Workable	1 000 m ² - Approximately
Deck Strength	10 t/m ²
ASFA 2-4	Force on chock 4 tonnes. 0-50mtr/min. 8 units arranged in 2 groups
Capstans	2 x 10 t NDM Capstan10
Aft Winches	2 x 10 t NDM mw.mw 10
Tugger Winches	2 x 15 t NDM twtu15
Knuckle Boom Crane	1 x 2 t at 18 m
Life Rafts	4 x 25 persons
Man Overboard Boat	1 x MARE GTC 700 2 VD.35 knts. 10 Persons. Redundant engines
Socket Outlets on Deck	2 pcs. 16A 450V 3 phase + earth 2 pcs. 16A 230V 2 phase + earth

- ▶ **Deck Cargo Capacity** 1,750 tonnes

M/V Pacific Gannet

Brake Horsepower	6,434 BHP	Clear Deck Space	810 m2
Deadweight	4,054 - 4,103 tonnes	Deck Cargo Capacity	1,750 tonnes

General Information

Port of registry:	Singapore
Built:	Japan Marine United Corporation - September 2014
Flag:	Singapore
Call Sign:	9VFJ7
IMO No.:	9666883
Classification:	DNV +1A1, Offshore Service Vessel – Supply, SPS, Dynpos AUTR, FiFi 1, Clean, SF, E0.
ERN:	99,99,99,97

Dimensions

Length, overall:	84.65 metres
Length, BP:	75.70 metres
Breadth, moulded:	18.00 metres
Depth, main deck:	7.60 metres
Design draft:	6.30 metres
Maximum draft midship:	6.43 metres
GT:	3585 tonnes
NT:	1076 tonnes

Capacities

Deadweight (maximum):	4078 tonnes
Clear Deck Area:	810 m2
Deck Strength:	10 t/m2 / 5 t/m2
Deck Cargo:	1750 tonnes
Ship Fuel:	306 m3 + 591 m3 (Using NLS tanks)
Cargo Fuel:	797 m3 + 172 m3 (Using NLS tanks)
Potable Water:	684 m3
Ballast Water / Drill Water:	1753 m3
Brine / DMA / Glycol / Liquid Mud:	762 m3 @ 2.5 t/m3
Dry Bulk:	318 m3
Base Oil:	190 m3
Ship's Stores:	Freezer Room (-25deg C.) - approximately 19 m3 Cold Room (+4deg C.) - approximately 21 m3 Provisions store (+12deg C.) - approximately 30 m3

Machinery

Main Engines:	2 x Yanmar 6EY26LW; 1720 kW 2 x Yanmar 6EY18(A)LW; 680 kW Gensets = 4,800 kW (6,434 BHP)
Propulsion:	Automated Power Management Diesel Electric System
Azimuth Thruster:	2 x 2,000 kW (2 x 2,680.97 BHP) RRM Contaz 15 Azimuth Thrusters
Bow Thrusters:	3 x 730 kW (3 x 979 BHP) Brunvoll FU 63 LTC 1750 electric motor driven tunnel type, CPP, frequency controlled

M/V Pacific Gannet

Brake Horsepower	6,434 BHP	Clear Deck Space	810 m2
Deadweight	4,054 - 4,103 tonnes	Deck Cargo Capacity	1,750 tonnes

Emergency Generators: 1 x Doosan Infracore AD136TI 125kW Generator Engine

Deck Machinery

Tuggers: Rolls Royce Marine, 2 x 20t (@ 1st layer) with 250m of 22mm diameter wire capacity. Provided with portable controller.

Capstans: Rolls Royce Marine, 2 x 10t with warping head and drum capacity for 100m of 18mm diameter wire

Windlass: Rolls Royce Marine, 2 x combined mooring winch/anchor windlasses with warping ends and centre line rope mooring/storage drum.
2 x Cable lifters for 46mm chain, 10.1T line pull at a speed of 12m/min

Bow Mooring: 1 Drum, Capacity 220m of 64mm polypropylene mooring rope

Smit Towing Bracket: 1 x 200 t

Crane Capacity: 1 x 5t @ 14 metres radius, knuckle boom crane

Electronics

Main Radar: Furuno FAR-2837S-D ARPA Radar, S Band, 23.1"

Auxiliary Radar: Furuno FAR-2817-D ARPA Radar, X Band, 23.1"

Auto Pilot: Tokyo Keiki PR-6000

Gyro Compass: 3 x Tokyo Keiki TG-8000

Magnetic Compass: 1 x Tokyo Keiki

Echo Sounder: Furuno FE-700, dual frequency 50Hz and 200Hz

DGPS : Furuno GP-150

Anemometer : 2 x Gill Wind Observer

Speed Log: Furuno Doppler Speed Log DS-80

Communications: 1 x Furuno MF-HF (SSB) Transceiver integrated with DSC/Watch Receiver
2 x McMurdo S4 SART, 2 x McMurdo E5 EPIRB
1 x Furuno Inmarsat-C (no.1) - Felcom 18 (Integrated with EGC)
1 x Furuno NX-700B Navtex, 2 x FURUNO FM-8900S VHF Radios
1 x Furuno Inmarsat-C (no. 2) - Felcom 18"

Watch System: Furuno BR 510

Navtex Receiver: Furuno NX 700

Weather Fax: Furuno FAX-410

Satellite Communication: FBB: Sailor 500

AIS: Furuno FA-150

Satellite Navigation: Furuno GP-150

Voyage Data Recorder(VDR): Furuno VDR VR 3016

VHF: Furuno FM-8900S Semiduplex VHF

Electronic Chart Display: 2 x Furuno ECDIS FMD-3300

BNWAS: Furuno BR 510

Discharge Pumps

Fuel Oil: 1 x 150m³/Hr -9 Bar

Base Oil: 1 x 150m³/Hr -9 Bar

Potable Water: 1 x 150m³/Hr -9 Bar

Ballast Water: 1 x 150m³/Hr -9 Bar

M/V Pacific Gannet

Brake Horsepower	6,434 BHP	Clear Deck Space	810 m2
Deadweight	4,054 - 4,103 tonnes	Deck Cargo Capacity	1,750 tonnes

Drill Water:	1 x 150m3/Hr -9 Bar
NLS (Brine / Liquid Mud / Base Oil):	3 x 75m3/Hr - 18 bar at SG of 2.5
Dry Bulk:	80 tonnes/hr at 70m head
Cargo Flow Meters :	Fuel oil and fresh water
Special liquid (Methanol):	Prepared for Methanol with designated space for N2 plant and pumps
Hose Connections :	Fuel - TODO 4" Male Potable Water - WECO 4" Hammer Lug Union Figure 100 Female Drill Water - WECO 4" Hammer Lug Union Figure 100 Female NLS including Brine - TODO 4" Male Base Oil - TODO 4" Male Dry Bulk Tanks - WECO 5" Hammer Lug Union Figure 50 Female

Dynamic Positioning

Type:	GE Energy DPS21 - Duplex DP+IJS
Reference Systems:	1 x MDL Fan Beam Laser System, 2 x Veripos LD5 DGPS, 1 x HPR Sonardyne Acoustic Positioning System deployable by HPR tubes built into hull.
Control Modes:	Manoeuvre / Autopilot Position Aft bridge, Manual Thruster Control levers, Independent Joystick System and 2 DP workstations.
Joystick:	Independent Joystick GEE-CVT

External Fire Fighting

Capacity:	3700 m3/hr pump driven by electric motor
Monitors:	2 x 1200 m3/hr
Throw Length:	120 metres from bow
Throw Height:	50 metres at 70 metres distance
Drenching System:	1200 m3/hr combined with main pump
Foam Tank :	9.9 m3

Standby Rescue Equipment

1. 1 x MOB boat MP-660 Springer with 230hp inboard diesel engine and water jet propulsion. Maximum speed 3 persons 32 knots. Maximum capacity - 10 persons.
2. Rescue zone on both port and starboard side Main Deck.

Anti-Pollution

Dispersant Tank:	10.9 m3
Spray Nozzles:	Wartsila, Fixed installed spray nozzles for neat and dilute, port and stbd sides.

M/V Pacific Gannet

Brake Horsepower	6,434 BHP	Clear Deck Space	810 m2
Deadweight	4,054 - 4,103 tonnes	Deck Cargo Capacity	1,750 tonnes

Accommodation

Berths:	14 x 1 man (single) cabins
	13 x 2 men (double) cabins
	2 x 4 men (quadruple) cabins
	48 berths total
	1 x Messroom (with TV Lounge)
	1 x Hospital (1 bed)
	1 x Gymnasium

Environmental Features

1. All NLS cargo tanks built with free flowing design with external stiffening 2 metres from the bottom and sloped bottoms.
2. Oily Water Separator. Certified in accordance with IMO MEPC.107(49).
3. Sewage Treatment Plant certified to the latest IMO MEPC.159(55).
4. Prepared for future installation of a Ballast Water Treatment Plant.
5. Cargo loading and discharge stations provided with save-alls to an inboard Saveall Drains Tank.
6. Incinerator capable of burning plastics.

Miscellaneous

1. MRC Sound Reception System MSR-9200A
2. NLS Cargo re-circulating pumps, 3 x 50m³/hr - 7.5 bar.
3. Prepared for future installation of an N2 generator.
4. Two (2) HPR tubes built into hull
5. Wood sheathed main deck.
6. 3 x Xenon 2000W search lights on top of bridge, remotely controlled.

VROON OFFSHORE SERVICES

VROON OFFSHORE SERVICES is a leading maritime offshore-services provider, with over fifty years' experience in the business. The company delivers safe, reliable, high-quality and cost-effective services to all customers. When it comes to offshore-support work, Vroon provides a new approach, but one based on traditional qualities and a proven track record.

With a versatile fleet of more than 100 vessels and 2,400 highly qualified and experienced colleagues, Vroon Offshore Services (VOS) provides a diverse range of services and solutions for key offshore-support needs, including platform supply, emergency response and rescue, anchor handling, walk-to-work and subsea support.

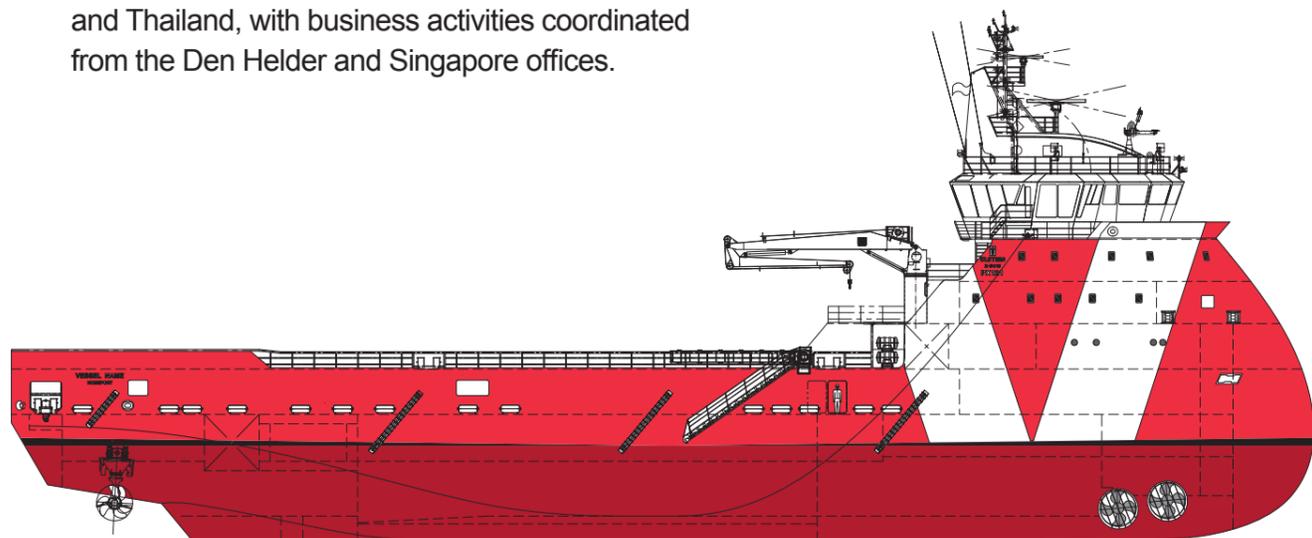

Vroon Offshore Services operates internationally, with a strong geographical presence in Northern Europe, the Mediterranean, North and East Africa, the Indian Ocean and Asian regions. The company has offices in Aberdeen (UK), Den Helder (NL), Genoa (IT) and Singapore (SG). VOS also operates in Mozambique, Malaysia and Thailand, with business activities coordinated from the Den Helder and Singapore offices.

The fleet services the oil and gas market segments and supports installation and maintenance of offshore wind farms and renewable-energy market segments.

The high level of expertise demonstrated by all VOS employees is the result of the company's extensive training and personal-development programmes, combined with many years of experience in offshore markets. A behavioural-based safety programme, "Leaders in Safety", forms an integral part of the VOS service deliverables.

The VOS platform-supply vessel (PSV) portfolio is based on vessel designs developed by the company's Performance and Engineering Department, reflecting both client specifications, market requirements and substantial in-house offshore experience.

Newest additions to the fleet are the six 83-metre sister PSVs: VOS Pace, VOS Paradise, VOS Partner, VOS Passion, VOS Patience and VOS Patriot.

PSV FLEET OPERATIONS AND EXPERTISE

- Cargo transportation
- Bulk transfers (wet and dry): generic liquids / muds / special products / chemicals
- Fire fighting
- Oil-spill recovery
- Bunker transfers
- Safety standby

BENEFITS

- Leaders in Safety
- Hotel-type comfort: 26 beds
- Extensive client email and data-communication facilities
- 850 m2 clear deck area
- Dynamic Positioning class 2
- Fuel efficient
- Optimised hull characteristics

Deadweight	4,200 t		
Capacities:		Navigational equipment:	
Deck strength	10 t/m2 aft of #35 5 t/m2 fwd of #35	Radar no. 1	1 x X-band radar JRC JMA-9122-9XA
Clear deck space	850 m2	Radar no. 2	1 x S-band radar JRC JMA-9132-SA
Fuel	1,464 m3	Echo sounder	1 x JRC JFE-680
Fresh water	1,035 m3 (705 m3 dedicated)	Auto pilot	1 x YOKOGAWA PT500A-P-Analog
Drill water / water ballast	1,674 m3	Magnetic compass	1 x YOKOGAWA SR-165
Mud / brine	1,293 m3	Joystick control	Integrated joystick control
Base oil	257 m3	Electric Chart Display System (ECDIS)	1 x JRC Navi-sailor 4000 ECDIS MFD
Dry bulk	260 m3		
Methanol	150 m3	Life-saving equipment:	
Slop	507 m3	Lifeboat	1 x 6 men MOB boat
		Liferafts	2 x 20 men + 1 x 6 men on each side
Machinery:		External fire fighting:	
Main engines	2 x diesel engines 1,630 kW (2,186 BHP) 2 x diesel engines 990 kW (1,328 BHP)	Capacity	LR FiFi class 1 - 3,820 m3 per hr
Propulsion system	2 x Azimuth thrusters 1,600 kW diesel electric	Monitor	> 2 x 1,200 m3 per hr
Bow thrusters	2 x 880 kW	Throw	> 120 m
Emergency generator	1 x 130 kW (VOS Pace / VOS Paradise 99 kW)	Foam system	1 x foam monitor
		Accommodation:	
Performance:		Total	26 beds
Fuel consumption (subject to weather)		Crew	14 beds (single cabins)
Full speed (13.5 knots)	abt 15.50 t/day	Charterer	12 beds (double cabins)
Service speed (10 knots)	abt 7 t/day	Hospital	1 bed
DP mode	abt 4 t/day	Gym	1
In port	abt 1 t/day	Recreation room	1
ERN number	99.99.94.86	Offices	1
		Compliance	MLC 2006
Deck machinery:		Crew comfort	2 x anti-rolling tank
Deck crane	3 t SWL @ 18 m		
Tuggers	2 x 10 t @ 35 m/min		
Capstans	2 x 10 t @ 30 m/min		
Communication equipment:			
MF/ HF radio	1 x JRC JSS-2150		
VHF radio (with out DSC)	1 x JRC JHS-770S		
VHF radio telephone (DSC)	2 x JRC JHC-770S

Version 4

Toisa Serenade

Type VS 483 MkII - Platform Supply Vessel

OUTLINE SPECIFICATION / DATA SHEET

GENERAL

Builder / Year	Wuchang China / 2008
Flag / POR	Bahamas / Nassau
Class	DNV + 1A1, SF, OIL REC, E0, Dynpos-AUTR, CLEAN, COMF-V(3) C(3), DK(+), HL(2.8), Tmon. Intact & Damage Stability according to IMO Resolution A.469 (XII).
Gross tonnage	3,665
Nett tonnage	1,582
Deadweight (summer)	5,324 tonnes

DIMENSIONS

Length OA	87.40 m
Breadth mld.	19.00 m
Draught (summer)	6.55 m

PERFORMANCE

Service speed	abt. 10 - 12 knots
---------------	--------------------

CARGO DECK

Clear deck area	abt. 63.8m x 16.0m = 1,020 m ²
Deck strength	5 tonnes /m ²
Deck load	Up to 3,210 tonnes

CARGO CAPACITIES

Fuel oil cargo	abt. 980 m ³
Ship's fuel oil	abt. 749 m ³
Potable water	abt. 1,723 m ³
Drill water	abt. 1,034 m ³
Dry bulk @ 5.5 Bar.	abt. 8 x 54.3 m ³ = 434 m ³ (15,256 ft ³)
Liquid mud @ 2.8 sg	abt. 450 m ³ - (2,836 bbls)
Base oil	abt. 225 m ³ - (1,418 bbls)

CARGO PUMPING

Fuel oil cargo	2 x 150 m ³ /hr @ 9 bar
Potable water	2 x 150 m ³ /hr @ 9 bar
Drill water	2 x 150 m ³ /hr @ 9 bar
Dry bulk compressors	2 x 30 m ³ /m @ 5.6 bar
Liquid mud	2 x 75 m ³ /hr @ 21 bar
Base oil	1 x 150 m ³ /hr @ 9 bar

STABILISATION

Two passive roll reduction stabilisation tanks

DP2 SYSTEM

DP / Joystick Control	IMO Class 2 DP System – Kongsberg K-Pos DP-21
Reference systems	Fan beam laser + 2 x DGPS

PROPULSION

Two Wärtsilä W6L32: 6cyl in line marine diesel engines each developing 3,000 kW @ 750 rpm each driving a 2,000 kW shaft alternator and CP propeller.
Two independent spade rudders.
Total developed power 6,000 kW (8,042 BHP)

ECONOMIC MODE

Only one engine is required to operate in the Economic Mode, with either engine driving two propellers. One propeller via gearbox, conventional drive, the other propeller via shaft alternator / electric motor, diesel electric drive.

GENERATORS

440V / 3Ph / 60Hz	
Shaft alternators / motors	2 x 2,000 kW
Main alternators	2 x 320 kW
Emergency alternator	1 x 250 kW

THRUSTERS

Forward tunnels	2 x 830 kW
Aft tunnels	2 x 830 kW

DECK MACHINERY

Deck/stores crane	5t SWL @ 15 m radius
Tugger Winches	2 x 12t hyd.
Capstans	2 x 10t hyd.

ACCOMMODATION

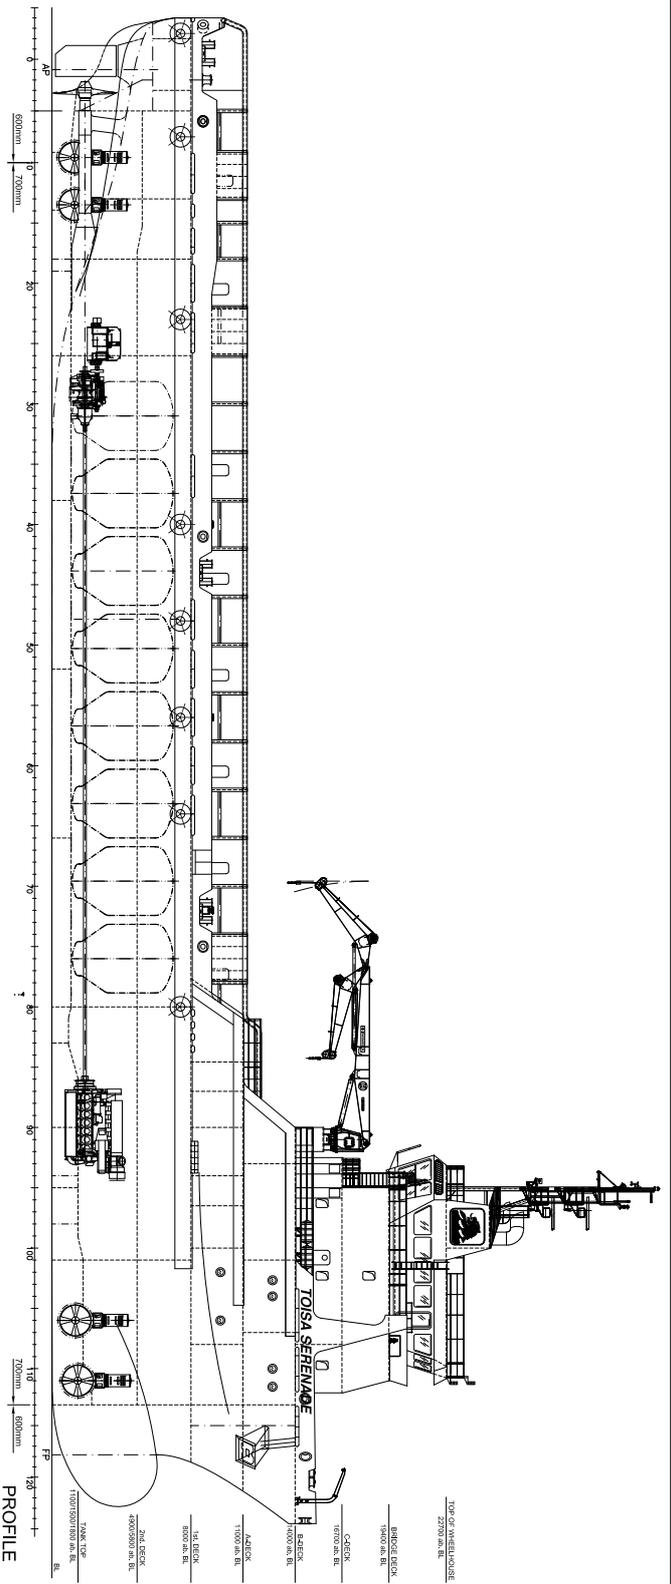

Wheelhouse and accommodation fully air conditioned	
Single berth cabins	2 suites + 10 en-suite
Two & four berth cabins	2 x 2 + 2 x 4
Complement	24 persons

OIL RECOVERY AND DISPERSANT

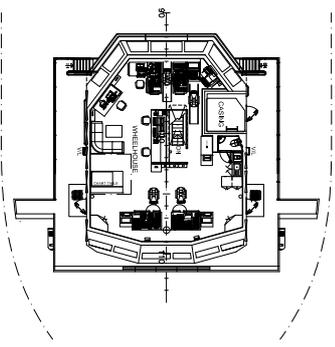

Portable deck mounted recovery booms, skimmers and pumps can be provided. Built-in ORO storage tanks.

Recovered Oil Tanks	450 m ³ (approx)
Slops Tanks	96 m ³ (approx)

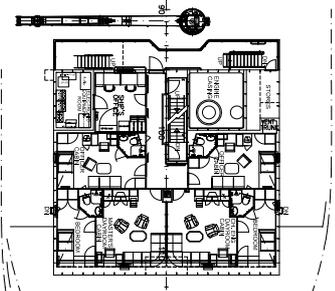

Portable deck mounted dispersant booms and ejectors can be provided. Built-in dispersant tank 10.0 m³

REM SUPPORTER STX06CD PLATFORM SUPPORT VESSEL

The REM fleet is designed by experienced and recognized Norwegian naval architects and built by yards in Norway. The fleet consists of PSV, AHTS, MPSV and OCV. The advanced fleet operates on a world wide basis and is operated by experienced crew, both on board and on shore. This makes REM a highly respected and preferred player in the Offshore Industry.

REM SUPPORTER STX06CD PLATFORM SUPPORT VESSEL

MAIN DESCRIPTION

Type of vessel	PSV 06 CD
Classification	DNV +1A1, SF, E0, DYNPOS- AUTR,DK (+),HL (2,8), Clean Design, NAUT-OSV(A), Comf-V(3), LFL*, ICE-C, Oil Rec,
Place of build	STX,Langstein, Norway
Year of build	January 2012
Flag	NOR
Ship Owner	Rem Supply AS
Ship Manager	Rem Maritime AS
Design Company	STX OSV
Yard Number	754
IMO Number	9591868
Call Sign	LCLW

MEASUREMENTS

Lenght o.a	94.20 m
Lenght b.p.p	84.90 m
Breath mld	20.00 m
Draft mld Main Deck	8.30 m
Draft summer	6.80 m
Dead Weight tonnes	5300 T at draught 6,77 m midship
Gross tonnage	4218 GRT

MACHINERY

Generator sets:	
Genset	4 x 1980 kW/900 rpm, Type: MAN 9L21/31
Main propulsion	2 x 2500 kW / 0-1200 rpm, Azipull 100 FP, Rolls Royce,
Emergency Generator	1 x 133 kW / 1800 rpm, Mitsubishi 6D16T
SCR system installed on main engines for NOX reduction	

THRUSTER FORW.

Azimuth thruster	1 x 880 kW, Rolls Royce TCNS 73/50-180 CP
Tunnel thrusters	2 x 880 kW, Rolls Royce TT2000 DNP CP

VESSEL SPEED

Max speed	Approx 16 knots
Economic speed	Approx. 11 – 12 knots

CONSUMPTION

Max speed	Approx 24 m ³
Economic speed	Approx 11 m ³
DP Operation	Approx 5 - 6 m ³
St. by at sea	Approx 3.5 m ³
Port consumption	Approx 2 m ³

CAPACITIES

Deck load max	3200 t
Dry Bulk Capacities	400 m ³
Potable/Fresh Water	1100 m ³
Drill Water/Ballast	2450 m ³
Mud / Braine	1250 m ³
Base Oil	550 m ³
Fuel Oil	1300 m ³
Methanol	230 m ³
Urea	40 m ³
ORO	1900 m ³
Slop	35 m ³
NOFO 2099	

2 x Passive rell reduction tanks

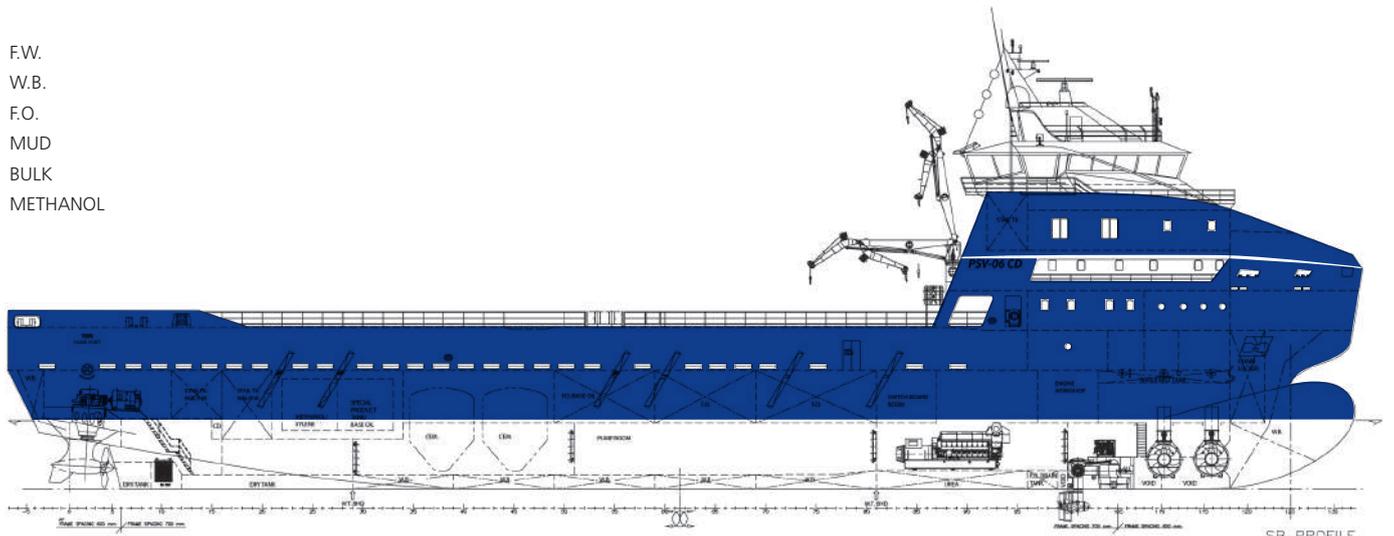

DISCHARGE

Dry Bulk	2 x 1554 m ³ / hr at 5,6 bar - screw compressors TMC
Fresh Water	2 x 250 m ³ / hr at 9 bar – Electric 2 speed + 1 x EX due to ORO mode
Drill water / Ballast	2 x 250 m ³ / hr at 9 bar – 1 hydraulic , 1 electric / EX
Liquid Mud (SG 2,5)	2 x 100 m ³ / hr at 9 bar – Hydraulic
Brine (SG 2,0)	2 x 100 m ³ / hr at 9 bar – Hydraulic
Base oil	2 x 250 m ³ / hr at 9 bar – Electric 2 speed
Fuel Oil	2 x 250 m ³ / hr at 9 bar – Electric 2 speed
Special product	2 x 75 m ³ / hr at 9 bar - Hydraulic
Methanol	2 x 75 m ³ / hr at 9 bar - Hydraulic
Slop	1 x screw 20m ³ / hr 10 bar - Electric
ORO 5	1 x 109 m ³ / hr at 3 bar - Hydraulic

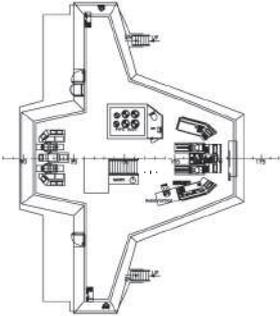

BULK CARGO STATIONS

MAIN DECK

TWEEN DECK

TANK TOP

The REM fleet is a modern and sophisticated fleet, designed by experienced and recognized Norwegian naval architects and built to a high quality by experienced yards in Norway.

DECK EQUIPMENT

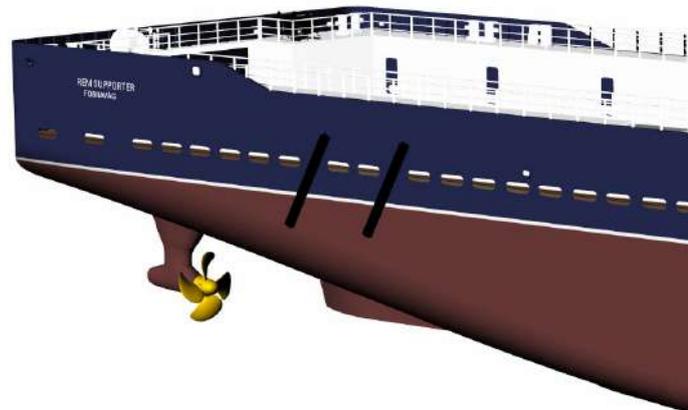

Deck Area	1075 m ²
Deck cargo (COG = 1 m above deck)	1005 m ²
Deck Strength	10 t/m ²
Mooring winces	2 x 10 tonnes
Windlass	2 x 10 tonnes
Tugger winches	2 x 10 tonnes

Deck Crane	1 x 5 t at 10 m – TTS
Deck Crane	1 x 1 t at 10 m – TTS

Tank Washing	Alpha Laval
Life Rafts	6 x 16 Pers
Man Overboard Boat	1 x Mare FRB 700, 15 persons.
NOFO cabinet fwd. SB	1 x 2 pcs. 32A 450V 3 phase + earth Eex-ed. + 2 pcs. 16A 230V 2 phase + earth Eex-ed
NOFO cabinet PS aft.	2 pcs. 16A 230V 2 phase + earth Eex-ed
NOFO cabinet SB aft.	2 pcs. 16A 230V 2 phase + earth Eex-ed

DYNAMIC POSITION

Class	DP II (AUTR)
Type	Rolls Royce Icon
Reference systems	2 x DGPS Veripos 1 x SyScan laser

ANCHORING EQUIPMENT

Anchor Points	2 x 12 tons
Winches	2 x electric driven anchor/mooring

ACCOMMODATION

Number of cabins	
Single cabins	14
Double cabins	7
Hospital	1
Total Accommodation	28 Berths,
All cabins are fully Air-conditioned	

Laundry	1 of
Messroom	1 of
Dayrooms	2 of

UT-Design™

UT 776 WP – Platform Supply Vessel

UT 776 WP - General

This specification together with general arrangement plan describes a Platform Supply Vessel of UT-Design™ type UT 776 WP which is designed for satisfying the general demands of the offshore industry.

The vessel to be designed and equipped for following duties:

- Carrying and unloading to rigs and production platforms, pipe laying barges etc.:
- Deck cargo
- Pipes on deck
- Liquid cargo(maximum 800 m³ of hazardous and noxious liquid like brine, mud etc.)
- Cement / Barite
- Oil recovery according to NOFO 2009
- Rescue operations (NMD 150)

Solutions to your marine needs

Rolls-Royce provides an unrivalled range of products and services to the marine industry. With production facilities in nine countries and a comprehensive support network World Wide, we are a global supplier of marine solutions.

We deliver fully integrated ship systems comprising innovative and well proven

products customised to the individual ship and it's specific operation, ensuring an optimum solution for any application.

Whether you choose complete ship systems or less comprehensive solutions, you will always have the advantage of our special competence and technology.

Fact sheet

UT 776 WP – Platform Supply Vessel

General:

This specification together with general arrangement plan describes a Platform Supply Vessel of UT-Design™ type UT 776 WP which is designed for satisfying the general demands of the offshore industry.

Main Particulars:

Length overall	approx.	91,7 m
Length between p.p.	approx.	82,8 m
Breadth moulded	approx.	20,0 m
Depth main deck	approx.	8,2 m
Design draft	approx.	6,0 m
Max. draft midship	approx.	6,8 m
Draft with 2,0 m freeboard	approx.	6,2 m

Tank Capacities:

Ballast water	approx.	1850 m3
Drillwater	approx.	1850 m3
Freshwater	approx.	1000 m3
Dry bulk cargo tanks (cement)	approx.	350 m3
Base oil	approx.	180 m3
Fuel oil incl Base oil (cargo and domestic)	approx.	1060 m3
Liquid Mud (6 tanks)	approx.	900 m3
Liquid Brine (4 tanks)	approx.	600 m3
Methanol/Special Prod(4 tanks)	approx.	340 m3
Recovered oil (NOFO 2009)	approx.	1500 m3
Cargo deck area (10 t /m2)	approx.	1030 m2
Deck cargo (G=1.0 m above deck)	approx	2700 T
Deadweight at summer-draught	approx.	5000 T
Gross Tonnage (1969) Intern. Above .		4000 GRT

Class:

Det Norske Veritas +1A1, E0, SF, Offshore Service Vessel Supply, DK(+), HL(2.8), LFL*, DYNPOS AUTR, CLEAN DESIGN, COMF-V(2), NAUT-OSV(A), OILREC, BWM-T, STANDBY-VESSEL (150), Winterization Basic, ICE 1C

Option:

ICE 1B

Option end

Performance:

Service Speed at d= 6,0 m:	Approx. 12-15 knots
Trial Speed at d= 4,0 m	Approx. 17,0 knots
Economic speed :	Approx. 11-13 knots

Cargo Discharge Pumps:

2 x Ballast/Drill water	Cap.: 250 m3/h - 9 bar
2 x Fuel (ORO)	Cap.: 250 m3/h - 9 bar
2 x Freshwater	Cap.: 250 m3/h - 9 bar
2 x Brine	Cap.: 100 m3/h - 24 bar each
3 x Liquid mud (ORO)	Cap.: 100 m3/h - 24 bar each
1 x Base oil	Cap.: 75 m3/h - 9 bar each
4 x Methanol/Special Product	Cap.: 75 m3/h - 9 bar each

Side Thrusters:

1 x TT 2200 DPN FP SuperSilent, 883 kW
1 x TCNS 73/M-180 FP, 880 kW

Roll Reduction System:

Two off Rolls-Royce Marine's type roll reduction tanks.

DP-System:

A DP system, making the vessel comply with DNV notation DYNPOS AUTR to be arranged.

Communication Equipment:

Radio installation according to GMDSS, A3 and of latest modern and practical navigation equipment available according to separate specification.

Winches/Cranes:

One double windlass/mooring winch
Two 15 tonnes tugger winches
Two 10 tonnes capstans
Two deck Cranes 10 tonnes - 8-14 m.arm. (approved by NMD for rescue basket operations)

Safety Equipment:

The vessel to have safety equipment according to SOLAS for min. 27 persons.

Accommodation:

The vessel to have accommodation and equipment for 27 persons.

Main Azimuth Thrusters:

2 x Rolls-Royce Marine's CP Compass Thruster Systems, Azipull120 FP, with the following particulars:
Electric motor output : 0 - 2500 kW each
Rated speed : 0 - 1200 rpm
Propeller diameter : 3200 mm

Main Generator Set:

Four off Rolls-Royce Marine's main generator sets.
4 x Bergen Diesel C25:33L6ACD
MCR approx. : 4 x 1843 kW
Rating approx. : 4 x 2048 kVA
Voltage : 690 V / 60 Hz

Generator Sets:

1 off Harbour generator set:
600 kW / 750 kVA, 690V, 60 Hz

Symbols and values

SPEED = Vessel speed
FN = Froude number [LWL]
FV = Froude number [VOL]

RN = Reynolds number [LWL]
CF = Frictional resistance coefficient
CV/CF = Viscous/frictional resistance coefficient ratio [dynamic form factor]
CR = Residuary resistance coefficient
dCF = Added frictional resistance coefficient for roughness
CA = Correlation allowance [dynamic]
CT = Total bare-hull resistance coefficient

RBARE = Bare-hull resistance
RAPP = Additional appendage resistance
RWIND = Additional wind resistance
RSEAS = Additional sea-state resistance
RCHAN = Additional shallow/channel resistance
RTOWED = Additional towed object resistance
RMARGIN = Resistance margin
RTOTAL = Total vessel resistance

PEBARE = Bare-hull effective power
PETOTAL = Total effective power

CTLR = Telfer residuary resistance coefficient
CTLT = Telfer total bare-hull resistance coefficient
RBARE/W = Bare-hull resistance to weight ratio

+ = Design speed indicator
* = Exceeds parameter limit

Hull data

General		Planing	
Configuration:	Monohull	Proj chine length:	0,000 m
Chine type:	Round/multiple	Proj bottom area:	0,0 m2
Length on WL:	83,090 m	LCG fwd TR:	[XCG/LP 0,000] 0,000 m
Max beam on WL:	[LWL/BWL 4,343] 19,130 m	VCG below WL:	0,000 m
Max molded draft:	[BWL/T 2,908] 6,578 m	Aft station (fwd TR):	0,000 m
Displacement:	[CB 0,722] 7742,00 t	Deadrise:	0,00 deg
Wetted surface:	[CS 2,139] 1693,7 m2	Chine beam:	0,000 m
ITTC-78 (CT)		Chine ht below WL:	0,000 m
LCB fwd TR:	[XCB/LWL 0,500] 41,545 m	Fwd station (fwd TR):	0,000 m
LCF fwd TR:	[XCF/LWL 0,620] 51,545 m	Deadrise:	0,00 deg
Max section area:	[CX 0,989] 124,5 m2	Chine beam:	0,000 m
Waterplane area:	[CWP 0,850] 1351,1 m2	Chine ht below WL:	0,000 m
Bulb section area:	11,1 m2	Propulsor type:	Propeller
Bulb ctr below WL:	3,503 m	Max prop diameter:	2500,0 mm
Bulb nose fwd TR:	87,000 m	Shaft angle to WL:	0,00 deg
Imm transom area:	[ATR/AX 0,000] 0,0 m2	Position fwd TR:	0,000 m
Transom beam WL:	[BTR/BWL 0,000] 0,000 m	Position below WL:	0,000 m
Transom immersion:	[TTR/T 0,000] 0,000 m	Transom lift device:	Flap
Half entrance angle:	33,61 deg	Device count:	0
Bow shape factor:	[WL flow] 1,0	Span:	0,000 m
Stern shape factor:	[WL flow] 1,0	Chord length:	0,000 m
		Deflection angle:	0,00 deg
		Tow point fwd TR:	0,000 m
		Tow point below WL:	0,000 m

Propulsor data

Propulsor		Propeller options	
Count:	2	Oblique angle corr:	Off
Propulsor type:	Propeller series	Shaft angle to WL:	0,00 deg
Propeller type:	CPP	Added rise of run:	0,00 deg
Propeller series:	B Series	Propeller cup:	0,0 mm
Propeller sizing:	By total drag	KTKQ corrections:	Custom
Reference prop:		Scale correction:	None
Blade count:	4	KT multiplier:	1,000
Expanded area ratio:	0,3811 [Size]	KQ multiplier:	1,000
Propeller diameter:	2500,0 mm [Keep]	Blade T/C [0.7R]:	0,00
Propeller mean pitch:	[P/D 0,9319] 2329,7 mm [Size]	Roughness:	0,00 mm
Hub immersion:	3503,0 mm	Cav breakdown:	Off
Engine/gear		Design condition	
Engine data:		Max prop diam:	2500,0 mm
Rated RPM:	0 RPM	Design speed:	13,00 kt
Rated power:	0,0 kW	Reference power:	0,0 kW
Gear efficiency:	1,000	Design point:	0,000
Load correction:	Off	Reference RPM:	1200,0
Gear ratio:	5,418 [Size]	Design point:	1,000
Shaft efficiency:	0,980

Symbols and values

SPEED = Vessel speed

PETOTAL = Total vessel effective power
WFT = Taylor wake fraction coefficient
THD = Thrust deduction coefficient
EFFR = Relative-rotative efficiency

RPMENG = Engine RPM
PBPROP = Brake power per propulsor
FUEL = Fuel rate per engine
LOADENG = Percentage of engine max available power at given RPM

RPMPROP = Propulsor RPM
QPROP = Propulsor open water torque
QENG = Engine torque
PDPROP = Delivered power per propulsor
PSPROP = Shaft power per propulsor
PSTOTAL = Total vessel shaft power
PBTOTAL = Total vessel brake power
TRANSP = Transport factor

EFFO = Propulsor open-water efficiency
EFFG = Gear efficiency (load corrected)
EFFOA = Overall propulsion efficiency [=PETOTAL/PSTOTAL]
MERIT = Propulsor merit coefficient

THRPROP = Open-water thrust per propulsor
DELTHR = Total vessel delivered thrust

J = Propulsor advance coefficient
KT = Propulsor thrust coefficient [horizontal, if in oblique flow]
KQ = Propulsor torque coefficient
KTJ2 = Propulsor thrust loading ratio
KQJ3 = Propulsor torque loading ratio
CTH = Horizontal component of bare-hull resistance coefficient
CP = Propulsor thrust loading coefficient
RNPROP = Propeller Reynolds number at 0.7R

SIGMAV = Cavitation number of propeller by vessel speed
SIGMAN = Cavitation number of propeller by RPM
SIGMA07R = Cavitation number of blade section at 0.7R
TIPSPEED = Propeller circumferential tip speed
MINBAR = Minimum expanded blade area ratio recommended by selected cavitation criteria
PRESS = Average propeller loading pressure
CAVAVG = Average predicted back cavitation percentage
CAVMAX = Peak predicted back cavitation percentage [if in oblique flow]
PITCHFC = Minimum recommended pitch to avoid face cavitation

+ = Design speed indicator
* = Exceeds recommended parameter limit
! = Exceeds recommended cavitation criteria [warning]
!! = Substantially exceeds recommended cavitation criteria [critical]
!!! = Thrust breakdown is indicated [severe]
--- = Insignificant or not applicable
