<sup>1</sup> Y56H + D168V confers 2472 fold-increase resistance to paritaprevir *in vitro*.

<sup>2</sup> As L159F and C316N were sequenced in different amplicons, in cases of patients who carried both RAS at frequency below 100%, the frequency of genomes carried L159F+C316N combined among viral population reported here is just approximation of the real number.

<sup>3</sup> AS each RAS were sequenced in different amplicons, the real frequency of combinations within viral population is only an estimation about
