

## **Supplemental information**

### **Cardiac protection induced by urocortin-2 enables the regulation of apoptosis and fibrosis after ischemia and reperfusion involving miR-29a modulation**

**Isabel Mayoral-González, Eva M. Calderón-Sánchez, Isabel Galeano-Otero, Marta Martín-Bórnez, Encarnación Gutiérrez-Carretero, María Fernández-Velasco, Nieves Domenech, María Generosa Crespo-Leiro, Ana María Gómez, Antonio Ordóñez-Fernández, Abdelkrim Hmadcha, and Tarik Smani**

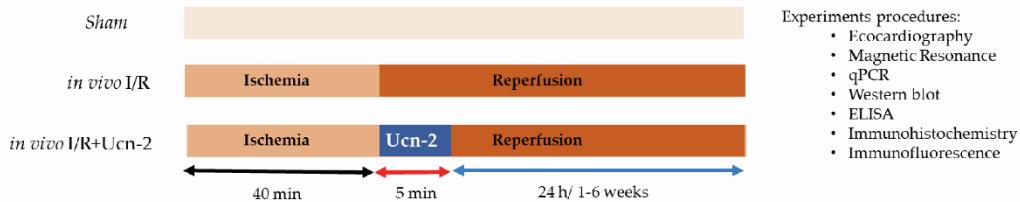

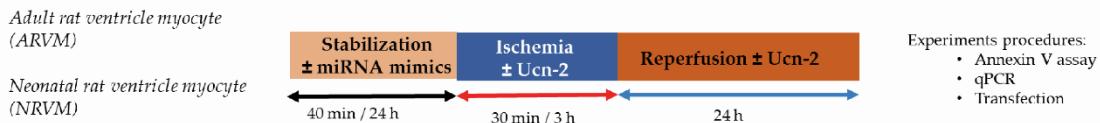

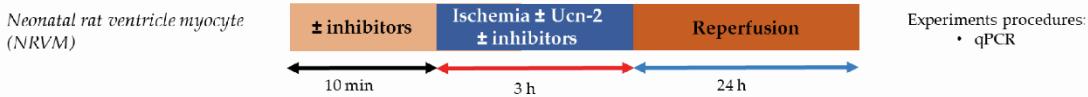

**SUPPLEMENTAL TABLE 1.** Data table show the list of genes from Apoptosis and Survival Tier 1 commercial plate for genes expression in samples taken from control NRVM in I/R, and in NRVM transfected with mimics of miR-29a or miR-251\_1\*. A mix of 4 cultures was added to each pool. Results are expressed in log fold change.

**SUPPLEMENTAL FIGURE 1. Cartoons outlining the experimental protocols of ischemia and reperfusion (I/R) conducted *in vivo* in animal models and *in vitro* in isolated cardiac myocytes.** (A) Experiments were performed *in vivo* in 3 experimental group: **Sham** (upper bar), rats subjected to open chest surgery without ligation of the coronary artery. ***In vivo* I/R** (middle bar): rats subjected to transient ischemia produced by left descending coronary artery ligation during 40 min and infusion of the vehicle (0.9% NaCl) through tail vein injection 5 min before reperfusion. ***In vivo* I/R + Ucn-2** (lower bar): Same procedure as in I/R group, but instead of vehicle, Ucn-2 (150 µg/Kg) was infused through the tail vein 5 min before reperfusion. In right, experimental procedures performed using the animal model 24h, 1 or 6 weeks after the intervention. (B) *In vitro* protocol conducted in adult rat ventricle myocyte (ARVM) and in neonatal rat ventricle myocyte (NRVM). Isolated cardiac myocytes were divided in the following groups, **Control** for untreated cardiac myocytes. **I/R** for cells exposed to simulated ischemia solution during 30 min (ARVM) or 3 h (NRVM) and later reoxygenated with freshly control solution. ARVM were transfected with miRNA mimics 24 h before starting the experiments. **I/R + Ucn-2**: same as in I/R, but Ucn-2 (10-30 nM) was added before and during reoxygenation. In right, Experimental procedures performed 24h after. (C) Same protocol as in B. In this condition inhibitors, such as astressin (10 µM, CRF-R2 inhibitor), ESI-05 (10 µM, Epac2 inhibitor), H89 (1 µM inhibitor of PKA) or PD 098059 (5 µM, ERK1/2 inhibitor), were added 10 min before ischemia with 10 nM Ucn-2.

**SUPPLEMENTAL FIGURE 2.** miRNAs relative expression assessed in infarcted heart's risk zones of I/R and I/R+Ucn-2 animal model at 1 week. (A-F) Bar graphs summarizing relative expression of miR-125a, miR-139, miR-320, miR-324-3p, miR-324-5p and miR-499-5p\_1 in hearts' samples excised from sham, I/R, and I/R+Ucn-2 rats, 24 h and 1 week after the intervention. miRNA expressions were normalized to the endogenous control. Values are mean of Log Fold change  $\pm$  SEM ( $n =$  triplicate of 4-6). \*\*, \*\*\*, and \*\*\*\* indicate significance at  $p < 0.05$ ,  $p < 0.01$ , and  $p < 0.001$ , respectively.

**SUPPLEMENTAL FIGURE 3. Control experiments for the expression of miR-29a and miR-451\_1\*.** (A) Image view of the Apoptosis and Survival Plate Tier 1 used for Prime PCR assay. (B, C) Bar graphs comparing the expression of miR-29a and miR-451\_1\* in rats and NRVM subjected to *in vivo* and *in vitro* protocol of I/R. Samples were processed 24 h after the intervention. (D, E) Bar graphs show miRNAs' expression after NRVM transfection with mimics of miR-29a and miR-451\_1\*. Values are mean of Log Fold change  $\pm$  SEM (n = triplicate of 4-6). “\*\*”, “\*\*\*”, and “\*\*\*\*” indicate significance at  $p < 0.05$ ,  $p < 0.01$ , and  $p < 0.001$ , respectively.

**SUPPLEMENTAL FIGURE 4. miRNAs relative expression assessed in risk zones of infarcted hearts.** (A, B) Bar graphs summarizing relative expression of *Mapk-8* and *Bcl-2* in hearts' samples excised from sham, I/R, and I/R+Ucn-2 rats, 24 h and 1 week after the intervention. Gene's expressions are normalized to the endogenous control. Values are mean of Log Fold change  $\pm$  SEM ( $n =$  triplicate of 4). “\*”, “\*\*”, and “\*\*\*” indicate significance at  $p < 0.05$ ,  $p < 0.01$ , and  $p < 0.001$ , respectively.
