Indications, Complications, and Outcomes of Cardiac Surgery after Heart Transplantation: Results from the CASH Study

Supplemental Material

| Supplement Table, Results of Univariate Logistic Regression Models (Outcome In-hospital Mortality) | | | |
|--|------------|-------------------------|---------|
| Prognostic Factor | Odds Ratio | 95% Confidence Interval | p-Value |
| Postoperative Acute Kidney Injury | 14.72 | 3.30 - 65.61 | 0.0006 |
| Urgent Indication | 3.50 | 0.90 – 13.55 | 0.07 |
| Age (10 years) | 1.81 | 0.92 – 3.55 | 0.08 |
| EuroSCORE II (log2-transformed) | 1.96 | 1.02 – 3.74 | 0.04 |
| Recipient Sex (male vs female) | 0.48 | 0.11 - 2.08 | 0.32 |
| Time since HTX (years) | 0.99 | 0.87 – 1.13 | 0.89 |
| Baseline Serum Creatinine (log2-transformed) | 1.42 | 0.45 - 4.49 | 0.55 |
